**Table 9: Liquidity Coverage Ratio (LCR)**

Unit: THB

	Quarter 2/2020 (average)	Quarter 2/2019 (average)
(1) Total high-quality liquid assets (HQLA)	9,668,645,171	7,271,284,004
(2) Total net cash outflows within the 30-day time horizon	8,957,829,472	5,917,934,245
<b>(3) LCR (%)</b> <i>Minimum LCR as specified by the Bank of Thailand (%)</i>	<b>108</b> 100	<b>123</b> 90

**Table 10: LCRs of the preceding quarters (for comparison)**

	Unit: %	
	2020 (average)	2019 (average)
1 <sup>st</sup> quarter	113	116
2 <sup>nd</sup> quarter	108	123

Commercial banks are required to maintain the liquidity coverage ratio in accordance with the guidelines as specified by the Bank of Thailand. The LCR is expected to encourage commercial banks to have robust and adequate liquidity position so that they can survive short-term severe liquidity stress. The minimum LCR, which is the ratio of high-quality liquid assets to total net cash outflows within the 30-day time horizon, of 60% was introduced on 1<sup>st</sup> January 2016 and increased by 10% each year until it reaches 100% in 2020.

$$\text{LCR} = \frac{\text{High Quality Liquid Assets (HQLA)}}{\text{Total net cash outflows within the 30-day time horizon under stressed scenarios}}$$

The average LCR for the 2nd quarter of 2020 of the Bank is 108%, which is 8% higher than the minimum LCR as specified by the Bank of Thailand. This LCR is the average of LCRs as at the end of April – 105%, May – 106% and June – 113%. The LCR consists of 2 main components, namely:

1. High-quality liquid assets (HQLA) include unencumbered high-quality assets with low risk and low volatility that can be easily monetized without any significant changes to their values, even in times of liquidity stress. The value of each type of HQLA is after the application of both haircuts and any applicable caps as specified by the Bank of Thailand.

The average HQLA of the Bank for the 2<sup>nd</sup> quarter of 2020 is 9,669 million Baht (62% of which is Level 1 assets, namely government bonds and cash), which is the average of HQLA as at the end of April – June. On this, the “Bank” holds several types of high-quality liquid assets to ensure the diversification of the stock of HQLA.

2. The amount of net cash outflows (net COF) is equal to expected cash outflows within the 30-day time horizon minus expected cash inflows within the 30-day time horizon under liquidity stress scenarios; but the expected cash inflows must not exceed 75% of the expected cash outflows.

The average net COF of the Bank for the 2<sup>nd</sup> quarter of 2020 is 8,958 million Baht, which is the average of net cash outflows within the 30-day time horizon as at the end of April – June. The expected cash outflows on which the Bank focuses under the severe liquidity stress scenarios are mostly from corporate deposits and interbank borrowings to which the run-off rates assigned are as specified by the Bank of Thailand. On the other hand, expected cash inflows are mostly from loan repayments with high-quality customers, deposits from high-quality counterparties, and maturing debt securities, to which the inflow rates as specified by the Bank of Thailand have been assigned.

In addition, the Bank also regularly examines its liquidity gaps and funding concentrations, which is part of the assessment and analysis of liquidity risk, to ensure that it has adequate liquidity to support the business. Liquidity risk is measured daily and effectively managed in accordance to the Bank's liquidity risk appetite.
