PROVIDER'S COMMENTS
MARKET REVIEW
Equity

For the month of January 2018, global equity did well despite 10-year US treasury yields climbing sharply from 2.4% to 2.7% in January 2018. Global equity markets started the year in 2018 rising 5.6% during the month. Rising 2018 EPS growth expectations and synchronized growth are driving a strong risk-on sentiment across the world. Meanwhile, Asia Ex-Japan equities (+7.5%) were primarily driven by the surge in Chinese equities (+12.5%) as Q4 GDP growth of 6.8% YoY as well as the trade surplus beat estimates. Semiconductor foundries, led by index heavyweight TSMC (+13.0%), propelled Taiwan (+7.6%) on anticipation of strong demand for high-end chips FROM cryptocurrency market players.

The FBMKLCI started the year strong up +3.99% on the back of heightened foreign interest in the market. Foreign investors were net buyers and bought RM3.4bn worth of shares in January 2018. Average market volume for the month surged to RM4b.5n shares/day vs last year's average daily of 2.5bn shares. BNM announced a 25bps OPR hike on January 25, 2018 and banking sector were viewed as the beneficiaries from rising interest rate. Meanwhile, the ringgit hit a new high since April 2016 at 3.8890 while the FBMKLCI reached a near 3-year high of 1870 points on 29TH January 2018. The local bourse rallied in tandem with regional markets which all ended on a strong positive note at month end.

Fixed Income

US Treasury ("UST") yields elevated higher during the month of January 2018 as major economic data were stronger than anticipated and these have somewhat resulted in the market reevaluating the risks ahead by adjusting higher rates as shown in UST yields action. Market is currently pricing in more than 90% probability of the first rate hike of the year in this upcoming Federal Open Market Committee ("FOMC") meeting in March 2018. With inflation expectations adjusting higher, UST yields curve bear-steepened with the longer curve of 10-year and 30-year UST grinding higher at about 30 basis points and 20 basis points accordingly compared to previous month's closing. At the end of January close, the 2-, 5-, 10- and 30-year UST were last traded at 2.141% (December-2017: 1.883%), 2.514% (2.206%), 2.705% (2.405%) and 2.935 (2.739%) respectively.

Malaysian Ringgit ("MYR") has continued to strengthen against United States Dollar ("USD") amid anticipation for the rate hike by Bank Negara Malaysia ("BNM") on its recent Monetary Policy Committee ("MPC") meeting held in January. While the sell-off has been exhibited in UST yields curve together with other global government bonds during the month, there has not been much of a follow through impact to the local bond markets. Instead, the 10-year and 15-year Malaysia Government Securities ("MGS") yield curve were well bid up on several occasions which seemed contrasting to what we have seen in UST yield. On top of that, the auctions were well received during the month. MGS curve bear-flattened but this is more apparent on the shorter-end of the curve as BNM delivered its 25 basis points hike. At closed, the 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS were reported at 3.398% (December-2017: 3.338%), 3.638% (3.531%), 3.929% (3.876%), 3.948% (3.905%), 4.408% (4.401%), 4.615% (4.580%) and 4.860% (4.850%) respectively. The Government Investment Issues ("GII") – Shariah compliant version of MGS exhibited the same pattern with its MGS counterpart which saw the higher yield more pronounced on the shorter-end part of the curve. However, we noted that the 15-year GII rallied more than 10 basis points month-over-month. At closed, the 3-, 5-, 7-, 10-, 15-, 20- and 30-year GII were reported at 3.568% (December-2017: 3.469%), 3.884% (3.791%), 4.080% (4.097%), 4.174% (4.187%), 4.555% (4.685%), 4.780% (4.771%) and 4.937% (4.945%) respectively.

MARKET OUTLOOK AND STRATEGY
Equity

The synchronised growth in the major developed countries will continue to support global growth, which will eventually flows to Asia as well, in the form of export growth. Monetary policy will remain in accommodative mode to support growth amidst the unsynchronised monetary policy stance by the developed economies. The United States of America ("U.S.") economy continued to show strength, with growing employment and wages. The sharp increase in the 10-year US Treasury yield created fear among investors on the pace and quantum of the US interest rate hike. European Union economic growth has been broad based, with low unemployment rate, while its monetary policies remains accommodative. Japan's growth continued to be supported by financial stimulus, while China's growth remains resilient.

Domestically, Malaysia's economic growth will remain robust supported by improving global growth and domestic demands. The positive economic backdrop will provide support for the equity market going forward, in addition to its undemanding valuation. In addition, the improvement of corporate earnings from its last two years of negative growth, strong domestic liquidity, stable Ringgit and an impending general election would continue to be supportive of the equity market.

We are of the view that Malaysia's corporate earnings growth of 6% is achievable in 2018 due to strong economy. However, the negative sentiment in the US is also expected to drag the index lower. The index touched the low of 1792 level on 4 February 2018 which was also close to the mean valuation of KLCI. We believe the KLCI performance will be volatile in the short term. We would expect the index to be well supported above 1790 level. We would take the opportunity to accumulate strong fundamental blue chip stocks on market weakness. We believe the index would go back to 1,870 level once the US stock market's volatility starts to disappear as investors would have priced in higher interest rate expectations.

Fixed Income

In Malaysia, BNM's 25 basis points increment in OPR to 3.25% in the last MPC meeting in January was widely expected by economists and market participants. The MPC suggests it acknowledged a more entrenched and synchronized global growth which appears to be more balanced compared to the previous MPC meeting. In term of inflation assessment, BNM is expecting the headline to average lower in 2018 from 3.70% recorded in year 2017. A stronger MYR will lend support to mitigate import costs and hence imported inflation. Overall, we believe the MPC's decision to hike a 25 basis points as accommodative and more in tune of normalizing monetary conditions rather than a start of tightening interest rates. Therefore, future policy action will broadly depending on the incoming data as well as trajectory of global monetary conditions as MPC continue to assess the balance of risks of growth and inflation. In term of strategy, we are neutral on duration with mildly bullish on domestic space with the expectation that local demand dynamics tend to prevail in 1Q 2018. As part of asset allocation strategy, we continue to overweight credit over government bonds for yield pick-up despite higher risk free rates as corporate credits should have better credit strength given better GDP rates. Nonetheless, we will continue to advocate on dip buying of government securities should the opportunity arises.
