RHB FOCUS INCOME BOND FUND – SERIES 5

The Fund aims to maximise returns at the Maturity Date from a concentrated portfolio of global debt instruments.

MANAGER'S COMMENTS**MARKET REVIEW**

US Treasury ("UST") yields continue to drift higher during the month of February 2018 as market participants were caught surprised by better than expected jobs report at the early part of the month while the affirmation of a hawkish Federal Open Market Committee ("FOMC") minutes further saw the benchmark 10-year UST yield rose to its high of 2.95% for the first time in four years. With market already pricing in the first hike of the year in this upcoming FOMC meeting in March 2018, UST yields curve steepened with the longer curve of 10-year and 30-year closed higher at about 16 basis points and 19 basis points accordingly compared to previous month's closing. At the end of February close, the 2-, 5-, 10- and 30-year UST were last traded at 2.250% (January-2018: 2.141%), 2.640% (2.514%), 2.861% (2.705%) and 3.124% (2.935%) respectively.

On economic data release, the Institute of Supply Management ("ISM") Manufacturing Index dropped from recent peak but remains strong in January. The ISM index slipped to 59.1% in January 2018 from 59.3% reading in December 2017. That is still above the 57.4% average reading for 2017 and well above the 50.0% level that marks expansion in manufacturing sector. Economists polled by MarketWatch expected a reading of 58.6%. Beneath the headlines, the details reveal a cooling off from ultra-high levels but still a healthy expansion. The new orders index dipped just 2 points to 65.4% in January 2018 from a reading of 67.4% in previous month. The ISM Manufacturing index continues to defy market's expectation for a pullback from a very high reading while the solid print at the start the year will reinforce market confidence that solid Gross Domestic Product ("GDP") is likely to continue in 2018. At the early part of the month, the Nonfarm Payrolls ("NFP") in the United States was released and the NFP number for January 2018 has appeared to be stronger than expected and much higher than the numbers recorded in the month of December 2017. The NFP in January added 200,000 new jobs against 180,000 consensus estimate. The most important takeaway from the jobs report was the unexpected strength in year-on-year wage growth which recorded 2.9% versus 2.6% estimated by consensus. On the inflation, the United States Consumer Price Index ("CPI") rose 0.5% in January 2018, considerably more than projections of a 0.3% by market consensus. Headlines CPI rose 2.1% on an annualized basis against 1.9% expected while core CPI increased 1.8% against estimates of 1.7%. The strength in core CPI reflects transitory factor which is a pop in apparel prices but also indicating a more persistent firming. Following the release, markets priced in a higher possibility for a third-rate hike before the end of the year. Investors were watching the reports very closely after fears of surging inflation send the stock market lower and the bond yields higher. A strong rise in inflation would also send borrowing costs higher and could cut into corporate profits. Towards the end of the month, the Federal Reserves ("Fed") has released minutes from its FOMC which was held in January 2018. The FOMC minutes from the January meeting endorsed that the strong growth reflects an upgraded outlook that makes officials more confident in continuing to raise rates but not a major shift towards a more hawkish policy in our opinion. In other words, strong growth makes the three hikes implied by the median 2018 dot plots as more likely than shifting to four, 25 basis points hikes in 2018. The minutes also emphasize that even with the stronger growth, Fed officials are likely to expect only a gradual firming of prices and consequently only increase policy rates gradually.

DISCLAIMER:

As this is a close-ended fund, units are no longer available for sale on the basis of the Prospectus dated 15 April 2015. A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Prospectus dated 15 April 2015 and its supplementary(ies) (if any) ("the Prospectus") before investing. The Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Prospectus relates will only be made on receipt of a form of application referred to in the Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the principal risk factors of the funds are credit/default risk, currency risk, interest rate risk, country risk, inflation/purchasing power risk, concentration risk and mismatch risk. These risks and other general risk are elaborated in the Prospectus.
