

RHB ENERGY FUND

The Fund aims to achieve long term capital appreciation through an investment that is linked to the global energy sector.

INVESTMENT STRATEGY

- 90% to 100% of NAV: Investments in Malaysian bonds, money market instruments, cash and deposits with financial institutions.
- Up to 10% of NAV: As capital payment for exposure to a derivative instrument in the form of a swap agreement that will provide the Fund with exposure to the global energy sector. With this capital payment, the Fund can have a notional amount of up to 100% of its NAV exposed to the Underlying which are linked to the global energy sector.

INVESTOR PROFILE

This Fund is suitable for investors who:

- seek investment opportunities in the global energy sector;
- seek capital growth;
- have a long term investment horizon; and
- have an appetite for risk to gain higher returns.

The Fund aims to achieve long term capital appreciation through an investment that is linked to the global energy sector.

MANAGER'S COMMENTS

MARKET REVIEW

In October, oil prices lost all its gains from the previous month, with Brent and WTI closing into the lower end of our range of US\$75.47/bbl and US\$65.31/bbl respectively. The fears of a supply shock from loss in Iran crude changed US decisions, and the US decided to grant waivers to 8 countries before sanction takes place on 3 November. Following Korea and Japan, the top 2 buyers India and China have shunned the cargoes, which could potentially remove 500k to 1m bbl/day off the seaborne market. While we did not assume a collapse of exports out of Iran, as Iran has been using the same trick of front loading their VLCC and sending them into storage in Dalian port, the drastic price action suggests that most are expecting waivers to come true as midterm approaches. We also witnessed the weakening of the time-spreads in Brent and WTI this month as a result of sharp reduction on CTA's positioning, such as the net long position reduced back to 2017 levels. Furthermore, adding to the price weakness, we saw strong crude production numbers out of OPEC+ and U.S. OPEC+ production climbed to the highest since 2016, while U.S. overtook Russia's crude production. In conclusion, we expect Saudi Arabia to play an increasingly important role as a key swing producer to keep oil prices within our range in 2019.

Brent Crude Oil price over the month sold off by -11.19% month on month ("mom") to USD 76.40/barrel as at the end of October, while on a 2018 year to date ("ytd") basis, it has increased by +13.37%.

MARKET OUTLOOK AND STRATEGY

We continue to remain long-term positive in the resources sector as in previous months. The cycle is turning and industrial activities out of major economies continue to be solid. Near term dollar strength as well as US-China trade dispute are the major uncertainties however.

In the longer term, gradual improvement in the global economic growth will increase oil demand, and eventually will bring supply-demand back into balance, however we are cognizant that the oil sector is cyclical and the sudden spike higher in oil prices could lead to a correction on signs of lower demand and/or higher output from OPEC or elsewhere.

We see commodity on a recovery mode and provide good inflation coverage. Furthermore, cleaner balance sheet and inexpensive valuation are supportive elements for its performance. Hence, we remain long-term positive in the resources sector. However, we are closely monitoring the trade dispute and its impact on demand.

Our upper range of WTI US\$75 / Brent USD\$85 will have upside potential in the coming months as oil market gets through one of its tightest periods (low inventory level, spare capacity in question) assuming no material supply addition from OPEC/Russia.

In terms of strategy, the Fund is still invested in local fixed income instruments for the resiliency of the domestic economy and increasing allocations in the energy swap on this dip in oil price. Despite the risks and volatility in the market, our medium to long term view holds that the continued gradual improvement in the fundamentals of the global economy will eventually lead to firmer oil prices.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 October 2018, the Volatility Factor (VF) for this fund is 10.1 and is classified as "High". (source: Lipper) "High" includes funds with VF that are above 8.7 but not more than 11.1 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2018 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2018.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Prospectus dated 3 September 2017 and its supplementary (ies) (if any) ("the Prospectus") before investing. The Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Prospectus relates will only be made on receipt of a form of application referred to in the Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are credit and default risk, interest rate risk, counterparty credit risk associated with derivatives, derivative risk, legal/ regulatory risk, sector risk, currency risk, management risk, risk linked to the MSCI World Energy Index, returns are not guaranteed and risks relating to JPMCCI Energy Excess Return Index and the Contag Indices. These risks and other general risks are elaborated in the Prospectus.
