

### RHB CHINA-INDIA DYNAMIC GROWTH FUND

This Fund aims to achieve medium to long term\* capital appreciation through investing mainly in the securities of corporations in, or corporations listed or to be listed on stock exchanges in, or corporations (wherever located) which, in the opinion of the managers, derive significant revenue or profits from or have significant assets or business interests in, the People's Republic of China ("China") or the Republic of India ("India").

\*Note: "medium to long term" in this context refers to a period of between 3 - 7 years.

#### INVESTOR PROFILE

This Fund is suitable for investors who:

- wish to tap the growth prospects of two emerging growth engines of the world i.e. China and India;
- are willing to accept a higher risk in their investments to obtain potentially higher returns in the medium to long term; and
- seek capital appreciation.

#### INVESTMENT STRATEGY

- At least 95% of NAV: Investments in the units of United China-India Dynamic Growth Fund.
- 2% - 5% of NAV: Investments in liquid assets including money market instruments and deposits with financial institutions.

This Fund aims to achieve medium to long term\* capital appreciation through investing mainly in the securities of corporations in, or corporations listed or to be listed on stock exchanges in, or corporations (wherever located) which, in the opinion of the managers, derive significant revenue or profits from or have significant assets or business interests in, the People's Republic of China ("China") or the Republic of India ("India").

\*Note: "medium to long term" in this context refers to a period of between 3 - 7 years.

### MANAGER'S COMMENTS

#### MARKET REVIEW

The U.S. Federal Reserve, in a unanimous decision, vowed to maintain the key overnight interest rate, or federal funds rate, near zero through at least 2022. It also promised to maintain the Fed's bond purchases at least at the current pace of around USD 80 billion per month in Treasuries and USD 40 billion per month in agency and mortgage-backed securities — a sign the central bank is beginning to shape its long-run strategy for the economic recovery. In the first economic projections of the pandemic era, U.S. central bank policymakers projected a 6.5% decline in GDP in 2020 and a 9.3% unemployment rate at year's end. They said that the rebound is expected to begin in earnest in 2021, with economic growth forecast at 5%.

Having prepared the markets to expect additional QE, the ECB's Governing Council delivered on its words and expanded the Pandemic Emergency Purchase Programme (PEPP) by Euro 600 billion. In addition, the ECB amended its forward guidance such that the previous word configuration that purchases will carry on until "until the end of this year" has been replaced with "at least the end of June 2021". This, effectively, makes QE open-ended and confirms that the ECB will remain active in the markets throughout 2021. In terms of the key numbers, the ECB's central forecasts foresee the economy contracting by -8.7% this year, followed by an expansion of 5.2% in 2021. The ECB cut its inflation forecast for 2020 from 1.2% to 0.8%.

The World Bank projected global economy to shrink by 5.2% in 2020 amid the Covid-19 pandemic. Economic activity in advanced economies is expected to shrink by 7.0% while the emerging markets and developing economies are expected to contract by 2.5%. The US is expected to shrink by 6.1% while the Euro area could see a 9.1% contraction. While India is expected to see a contraction of 3.2%, the Chinese economy is expected to grow by 1.0%. For 2021, the World Bank expects the global GDP to rebound by 4.2% with the US, China and India likely to grow by 3.9%, 6.9% and 3.1% respectively.

SSE 50 China A Share rose 4.27% and MSCI China rose 6.73% (MYR terms) in the month of June 2020.

Despite rising second-wave COVID-19 infection concerns globally, MSCI China has now erased all COVID-19-related losses and returned to positive gains for the year. For China, the rise of newly confirmed cases in Beijing in June was quickly contained and new cases have begun trending down. Thus far, it seems that smaller localized outbreaks have been handled swiftly and have not impacted the overall economic momentum, which has also been backed by policy support such as the announced 25bp rate cuts for re-lending and re-discount facilities.

On the external side, geopolitical tensions remain high, but US-China did hold its first in-person high level meeting since January, which was categorized as constructive by both sides. Overall, despite geopolitical and COVID-19 overhangs, investor sentiment seems quite positive following the bottoming-out in March; northbound inflows over the Stock Connect have seen RMB118bn in YTD net inflows and are outpacing all previous years, except 2018.

This has been in part driven by further A-share inclusion as FTSE Russell increased the A-share inclusion factor from 17.5% to 25%, with A-shares now representing ~6% of the FTSE Emerging Index. As for sector performance, leaders were dominated by new economy sectors such as technology (semi, consumer electronics), communication service (internet) and healthcare. It is noteworthy that the gap between these top three performing sectors and others has been quite significant, implying investors' preference for those sectors that are more resilient or could benefit from the COVID-19 outbreak.

May macro data confirmed further economic recovery, as production activity has largely normalized and demand conditions gradually restored. The better-than-expected activity data in May and April prompted us to revise up the full-year GDP growth to 2.0%yoy from 1.3%. June NBS manufacturing PMI rose 0.3pt to 50.9, with notable uptick of the export order component. Meanwhile, Caixin manufacturing PMI rose 0.5pt to 51.2.

MSCI India rose 5.01% (MYR terms), Sensex rose 6.09% (MYR terms) and Nifty rose 5.94% (MYR terms) in June 2020.

The stock market built up further from the positive momentum seen over the second half of May and continued a strong move upwards, in line with global markets, driven by optimism around opening of the economy and initial data indicators of pick-up in demand. Sensex index delivered a return of 7.68% over the month closing at 34915.80. Nifty index delivered a return of 7.53% over the month closing at 10,302.10.

#### MARKET OUTLOOK

Global equity markets have seen sharp positive momentum over the month as economies start to open post the lockdown and initial demand trends indicate a strong revival from the March lows. Monetary measures announced by large central banks including the US Fed, ECB, etc., have also turned the sentiment positive. Indian equity market has also taken a cue and seen a sharp revival. A gradual lifting of the lockdown and pick-up in economic activity remains critical and there are measures being taken by the Government and RBI to minimize the impact of the lockdown and ensure a smooth resumption. While near term uncertainties remain, the Target Fund Manager is confident that there will be no lasting impact on India's long-term growth potential and the current challenges may, in fact, provide new opportunities for growth by participating more meaningfully in the global supply chain. The Target Fund Manager's strategy is to focus on companies which have a healthy Balance Sheet that enables them to tide through the current challenging environment and possibly emerge stronger once the economy stabilizes. In the Target Fund Manager's opinion, those who survive the current crisis will be able to ride the next phase of growth with higher market shares, well entrenched brands and limited competition as marginal players with leveraged Balance Sheets will find it difficult to survive.

#### DISCLAIMER:

Based on the fund's portfolio returns as at 10 June 2020, the Volatility Factor (VF) for this fund is 15.6 and is classified as "Very High". (source: Lipper) "Very High" includes funds with VF that are more than 15.2 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 31 December 2019 which is calculated once every six months and is valid until its next calculation date, i.e. 30 June 2020.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 6 October 2017 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. This update does not amount to indicate that the SC has recommended or endorsed the Fund. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are management risk and foreign investment risks such as currency risk and country risk and the specific risks of the Target Fund are equity risk, single country, sector and regional risk, small and medium capitalisation companies risk, repatriation risk, regulatory risk, taxation risk and political risk. These risks and other general risks are elaborated in the Master Prospectus.
