**MANAGER'S COMMENTS**

**MARKET REVIEW**

The S&P 500 index increased in May, returning 4.76% (total return, in USD). While concerns of the coronavirus continued in May, equity markets followed positive tones of local economies re-opening, better-than-expected business commentary, and an optimistic market outlook released by the Federal Reserve. In April, the unemployment rate jumped to 14.7% in the largest month-over-month rate increase in history. The market largely shrugged this off, as many workers furloughed and will be expected to return to work when the economy starts to reopen. As concerns loom around the disconnect between stronger market performance and lagging economic data, investors continue to wait for more stimulus relief that is being discussed by leading officials. The best performing sectors were Information Technology, Materials, and Communication Services while the worst performing sectors were Consumer Staples, Energy, and Real Estate.
