

RHB GLOBAL NEW STARS FUND

This Fund aims to achieve medium to long term capital appreciation by investing in initial public offerings ("IPOs"), pre-IPO securities, post-IPO listed securities, debt securities and/or deposits.

INVESTMENT STRATEGY

- Up to 98% of NAV: Investments in post-IPO listed securities of approved markets issued within 3 years of their IPOs at the time of investment and securities offered through IPOs which have been approved for listing in the approved markets ("Post-IPO Portion" and "IPO Portion").
- Up to 10% of NAV: Investments in privately placed pre-IPO securities of companies which are established in the approved markets, that is pre-IPO deals of which the investee companies are targeting to obtain a listing on an approved stock exchange, and other corporate finance deals ("Pre-IPO Portion").
- 2% - 5% of NAV: Investments in liquid assets.

INVESTOR PROFILE

This Fund is suitable for investors who:

- are optimistic about investments in companies in the early growth stages;
- wish to participate in the potential upside of IPO;
- seek an investment well diversified across global markets;
- are fairly aggressive and willing to accept moderate to high risk in their investments; and
- prefer capital growth over a medium to long term period.

MANAGER'S COMMENTS

MARKET REVIEW

The global equity markets gained a strong 6.0% in August, shifting the year to date loss back to a positive return of 3.5%. Stocks climbed, and the top 3 performing sectors in the month of August were consumer discretionary (12.1%), information technology (+9.1%) and industrial (+8.1%). This comes after economic data bolstered optimism that a recovery from a pandemic-induced recession is on track. On the other side, only the utilities sector (-2.0%) registered negative returns in August. Within regions, Japan (+7.6%) and US (+7.3%) outperformed global peers, while the Europe (+3.8%), UK (+2.8%) and Asia ex-Japan (3.4%) underperformed in USD terms.

Governments around the world are still balancing between easing coronavirus lockdowns to revive and the economy versus controlling the resurgence of new cases. Total infections for Covid-19 reached 25 million worldwide, with numbers in India and Brazil still at concerning levels. As long as infections do not escalate to the point where countries start to consider implementing national-level measures, the economy should be fine. But with no medical solution yet for the virus, the improvement in mobility data may be limited and PMI normalization is largely completed. Globally, seven vaccines are now in phase 3 clinical trials, according to the WHO. Evidence so far suggests that the Covid-19 "Second Wave" has been more benign when comparing infection and death rates. Countries where the infections had troughed around June and are now increasing have not seen a corresponding increase in deaths. There are several reasons for this, including a more widespread testing protocol that catches less severe cases, better treatments, preparedness of national health systems and protection for the most vulnerable population.

In the US, attention was focused on Chairman Jerome Powell's speech at the Jackson Hole Symposium on 27 August on "Navigating the Decade Ahead: Implications for Monetary Policy". The new approach of the Fed's Policy Framework could be viewed as a flexible form of average inflation targeting, allowing inflation to run moderately above or below the Fed's 2% target for some time. This means that interest rates could be left lower for a longer period despite a rise in inflation. Regarding employment, the revised statement reflects the Fed's view that a robust job market can be sustained without causing an outbreak of inflation, and that the maximum level of employment is a broad-based and inclusive goal. If the FOMC changes its communications tools (say, in September) to reinforce these changes, it may be an "enhanced guidance" that refers to an inflation goal that is higher than it otherwise would be, or an unemployment goal that is lower than it otherwise would be. This in turn would imply "lower for longer" policy rates. That said, the recent moves in the market, such as higher inflation breakeven point, suggests that part of the new framework and the new 'tools' have largely been priced in.

Angela Merkel's coalition agreed to support an extension of Germany's Kurzarbeit subsidies through to end-2021. Those subsidies are used to pay the bulk of wages to workers who would otherwise be laid off during an economic shock, allowing firms keep them on payroll (i.e., paid furlough) for the duration. On a firm-by-firm basis, Kurzarbeit would typically expire after 12 months. The August Ifo business climate index climbed to a 21 month high of 92.6 points, up from 90.4 pts in July, although the expectations sub-index stayed below the consensus projection. This has helped reverse the worries from the poorer August flash PMIs.

In Japan, what surprised the market was Shinzo Abe, the nation's longest consecutive Prime Minister, unexpectedly announcing his intention to resign at a press conference on Friday. He has battled a disease for years and wanted to avoid causing problems for the government due to his condition. Since the outbreak of Covid-19 in March, the Abe administration's approval rating continued to fall, almost down to the lowest levels since Abe took office. The election to choose the next prime minister will likely be held in September, followed by the general resignation of the current cabinet. Abe will continue his role as prime minister until the new prime minister is decided. The term of the next prime minister is the same as Abe's term, which is until the end of September, 2021. Along with the BoJ, Abe was the promulgator of a weak-JPY and 'easy-money' policy since 2012. As the term of office for the BoJ Governor Haruhiko Kuroda is through April 2023, it is unlikely that the BoJ will shift its monetary policy upon Abe's resignation.

China's industrial profit growth rose to 19.6% YOY in July, up from 11.5% in June, taking its year-to-date growth to -8.1% YOY in July – compared to -12.8% in June (2019: -3.3%). This improvement was likely driven by a rise in PPI inflation to -2.4% YOY in July, improving from the -3.0% in June, as industrial production growth remained unchanged at 4.8% YOY for the month. Over the first seven months of 2020, profit growth at state-owned and private enterprises dropped to -23.5% and -5.3% YOY respectively, down from -12.0% and 2.2% in 2019; while profit growth at foreign enterprises over the same period inched up to -3.4% from -3.6% in 2019. Tensions with the US are likely to remain high as US November election draw nearer.

STRATEGY

Overall, we remain positive on Asia ex-Japan on prospects of growth uptick and within which, we favour China. China is the only major economy that registered a positive 2Q GDP growth (Figure 4). The speed and effectiveness at which China was able to deal with recent virus relapses while avoiding wide-scale shutdowns mitigate a downside risk that concerned us as recently as of a couple of months ago. Although we still anticipate clusters to occur going forward, China has acquired enough capacity to conduct mass testing relatively quickly. Such capacity allows it to identify and quarantine the transmission chains to prevent even larger outbreaks. Amid "First in First out", China is at the forefront of restarting the economy and more policy space to revive activity, but we will remain cautious amid the ongoing US-China tensions. A secondary risk is the severe flooding, which is still ongoing and hence the overall impact remains uncertain. Yet we expect any flooding impact (either on inflation or on economic growth) to be transitory.

Within developed markets, we prefer US relatively on the longer run as it has more policy space versus other developed markets, but key risks such as increasing new COVID-19 cases, political risks ahead of November election and delay to the next round of US stimulus, US-China/EU tensions and high valuations remain. We remain opportunistic and prefer stocks that have a healthy balance sheet, visible earnings growth and valuations support.

DISCLAIMER:

Based on the fund's portfolio returns as at 10 August 2020, the Volatility Factor (VF) for this fund is 15.5 and is classified as "High". (source: Lipper) "High" includes funds with VF that are above 12.8 but not more than 15.4 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2020 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2020.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the contents of the PHS and Master Prospectus dated 3 September 2017 and its supplementary(ies) (if any) ("collectively known as the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia ("SC") who takes no responsibility for its contents. The SC's approval or authorization, or the registration of the Prospectus should not be taken to indicate that the SC has recommended the fund. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors. If in any doubt, consult your banker, lawyer, stockbroker or an independent financial adviser.

The Manager wishes to highlight the specific risks of the Fund are Pre-IPO and IPO risk, country risk, currency risk and market risk. These risks and other general risks are elaborated in the Master Prospectus.
