MANAGER'S COMMENTS

MARKET REVIEW

In April, FBM KLCI remain flattish, +1.21% mom while YTD still recorded negative return, -0.35%. The KLCI lacklustre trend underperformed ASEAN regional markets but outperformed North Asia peers. Within Asia region, Philippines, Indonesia and Vietnam were best performers, advanced circa +14%, +13% and 10% YTD respectively while Japan Nikkei 225, HSCEI and SHCOMP were worst performers, fell circa 11%, 9.9% and 4% YTD. Corporate earnings are relatively mixed with investors stay cautious on Emerging Markets equities. Regional geo-political tension and corporate earnings disappointment are the key risks that drive equity risk premium higher while U.S and Eurozone recovery continue to weigh on EM fund outflow.

FIXED INCOME REVIEW & OUTLOOK

US Treasuries ("UST") rebounded in April, as the 1Q2014 GDP was even weaker than market estimation, edging up just 0.1% YoY (consensus: 1.1% YoY). At close, the 2-, 5-, 10- and 30-year UST were traded at 0.41% (March: 0.42%), 1.68% (1.72%), 2.65% (2.72%) and 3.46% (3.56%) respectively.

Strong UST performance spurred buying interest on Ringgit government bonds. Malaysia Government Securities ("MGS") mostly bullish flattened in April, with the long term yields compressed more than the short term yields. At close, the 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS were traded at 3.38% (March: 3.40%), 3.62% (3.57%), 3.94% (4.02%), 4.08% (4.12%), 4.42% (4.49%), 4.60% (4.59%) and 4.89% (4.87%) respectively. Similar to the strong performance of MGS, Government Investment Issues ("GII") also bullish flatten with 3-, 5-, 7-, 10-, 15-year and 20-year benchmark yields transacted at 3.42% (March: 3.37%), 3.81% (3.85%), 4.08% (4.13%), 4.23% (4.28%), 4.54% (4.65%) and 4.85% (4.85%) respectively.

We anticipate a snap back in growth for US in the 2Q and 3Q2014 as recent data have hinted at a rebound in both demand and output. Economic fundamentals actually have improved, especially as fiscal drag is dissipating and financial conditions are providing a significant tailwind for growth. With inflation stubbornly low at below 2% target, Fed is likely to keep Fed Fund Target Rate on hold for a prolonged period (mid to end-2015) even after the tapering is over. Whereas on the Euro Area, the large output gap and strong Euro are imparting a significant disinflationary bias, highlighting the need for ECB to adopt a more stimulative monetary policy stance. While economic activity is accelerating a little, we believe that the Central Bank will likely cut its key interest rates in the coming meetings (June), and will likely launch a large-scale asset purchase programme in 2H2014. In Asia, barring a strong export rebound, we believe GDP growth to remain disappointing in China which could trigger more supportive policies to pull down borrowing costs and boost investment in targeted areas. The CNY might continue to weaken against USD in the near term before any encouraging economic data is released. Lastly for Japan, the outlook for Bank of Japan ("BoJ") is quite uncertain as the officials have been reiterating a bullish view on the economy, especially inflation. We still believe that the BoJ will take additional easing action this year but timing might delay into 3Q2014 as the Central Bank reassesses the impact of consumption tax hike to be temporary or lasting.

MARKET OUTLOOK AND STRATEGY

Despite early May selloff/limit down in 3 small cap stocks due to Bursa warning of unusual activity which dampen the market sentiment temporarily, we maintain our positive view on equity market and envisage bottoming of corporate earnings downgrade and expect gradual recovery in 2H 2014. Nevertheless, Malaysia economy is expected to remain resilient. January loan growth edged up 11% yoy while inflation rate is projected to be around 3%. KLCI currently trade at 16x P/E vs FBM SmallCap Index at 11x P/E, both trade above 10-year historical average P/E but below +1SD.

On regional front, latest HSBC China manufacturing PMI came in 48.1, a reading below 50 level indicates contraction. We envisage China macro data continue to be mixed with soft patch due to Chinese govt determination to rebalance the economy. We expect the Chinese govt will react should cyclical weakness threaten GDP growth and unemployment. EM reliance on China growth for commodities export may face headwinds in 2014. We envisage commodity producing countries equities performance to continue lag the Developed Market equities.

On sector basis, we continue to favour tech, oil & gas, healthcare, consumer and telco while selectively bullish bias on infra related construction stocks. We foresee 2014 to be a reform year for regional economies and Malaysia govt to rollout targeted infra projects to spearhead the economy and continue its reform agenda including subsidy rationalization which augur well for the economy. Increase market volatility globally will create capital misallocation and outflow of funds from emerging markets, thus misprice securities from fundamental. We remain cognizant of prevalent risks but look into adding bombed-out good fundamental stocks to enhance alpha.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 April 2014, the Volatility Factor (VF) for this fund is 9.4 and is classified as "Moderate". (source: Lipper) "Moderate" includes funds with VF that are above 7.9 but not more than 10.6 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 31 December 2013 which is calculated once every six months and is valid until its next calculation date, i.e. 30 June 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are liquidity risk, small capitalisation companies risk, equities investment risks such as market risk and particular security risk, interest rate risk, credit / default risk and foreign investment risks such as country risk and currency risk. These risks and other general risks are elaborated in the Prospectuses.
