RHB-OSK ASIA FINANCIALS FUND

The Fund aims to achieve long term capital growth by investing primarily in equities or equity-related securities of corporations in, or corporations listed or to be listed on stock exchanges in, or corporations (wherever located), which derive significant revenue or profits from or have significant assets or business interests in, the financial sector in the Asian region (excluding Japan).

MANAGER'S COMMENTS**MARKET REVIEW**

Asia ex-Japan financial stocks gained in November, outperforming the broader Asia ex-Japan market, which eked out slight positive returns. The emerging markets as a whole underperformed and posted losses against gains in developed markets. Fixed income market performance was similarly mixed in November with slight gains in JACI while the rest of the G7, Investment Grade and High Yield bonds posted losses. Energy was the worst performer, posting double-digit losses in November and is now the worst-performer year-to-date, while Gold gained in November. The decline in energy prices impacted performance in certain markets, while China's surprise interest rate cut buoyed markets.

Within the financial sector, India and China were the best performing markets while Malaysia and Korea were the worst performers.

In terms of macroeconomic data, global leading indicators slipped in most markets in November. The US PMI stayed high at 58.7, though this was a slight dip from 59.0 in October. Japan slipped to 52.0 from 52.4 while the Eurozone dipped to 50.1 from 50.6. China's official PMI softened again to an eight-month low of 50.3 from 50.8 in October, with the private sector HSBC PMI falling to 50.0 from 50.4. Other latest activity indicators dipped across most markets. Industrial production and retail sales in the US, Japan and China dipped in October. Inflation was stable across the various regions. The Indonesia Central Bank raised interest rates by 25 bps at its meeting in November.

China market outperformed, led by financials as the central bank surprisingly cut interest rates on 21 November, marking the first rate reduction in more than two years. One-year benchmark lending rate was cut by 40 basis points (bps) to 5.6%, while the deposit rate was cut by 25 bps to 2.75%. The central bank's easing is expected to relax financial conditions for the broad economy and reduce the interest burden on the corporate sector, particularly the small-and-medium enterprises, highly-leveraged industrial and property sectors. However, the asymmetric nature of the rate cut is expected to hurt banks' net interest margins.

The ASEAN markets as a whole underperformed the broader Asia ex-Japan market. Malaysia was the worst-performer as the steep fall in oil prices impacted the oil and gas companies, while the ringgit weakness added to market woes. Corporate earnings also disappointed across the board. Indonesia cut fuel subsidies, in a move expected to save the government Rp110-140 trillion and was viewed positively by foreign investors as they net bought \$0.4bn. The Philippines GDP growth disappointed at 5.3% in 3Q14 with weak government spending, though this was offset by robust corporate earnings and declining oil prices.

Outlook & Strategy

The feared tightening of global liquidity following the end of quantitative easing by the US will likely be partially off-set by the Bank of Japan's monetary easing and the Japan government pension fund's target to raise its allocation in domestic equities and foreign assets. China's rate cut is also expected to ease monetary conditions. We expect the overall liquidity backdrop to remain supportive for risk assets, including Asia ex-Japan equities. An eventual rise in US rates could potentially cause market volatility, but we expect the US Federal Reserve to start hiking rates only by the middle of next year.

Asia remains the fastest growing region in the world and a beneficiary of the global economic recovery. Valuations for the region are still attractive and we believe the region presents favourable investment opportunities. The declining oil prices will present tailwinds to some markets and provide opportunities in certain stocks.

In China, rising financial risks and a slowing property market remain some of the key macroeconomic challenges but gradually improving corporate profitability and reform in the state-owned enterprises provide positive tailwinds for the market. The central bank's rate would lead to pressure on banks' net interest margins but should also alleviate some concerns on asset quality which has been the biggest overhang on the sector.

In Korea, we expect that the government's new pro-growth policy aimed at boosting household income growth will benefit domestic demand. A rate cut by the Bank of Korea could also improve liquidity although there could be some downward pressure on margins. This would be offset by higher loan growth from improved domestic demand.

We remain incrementally positive on India on the positive political sentiment and a stabilising macro environment. We continue to overweight key Asean markets as we turn incrementally more positive on Thailand with the stabilising political situation. We continue to favour Indonesia and the Philippines over the medium term where strong economic momentum and positive structural trends prevail continues.

Asian banks are well capitalised and very liquid due to their strong deposit base, and are in good shape to weather slower growth in the region. In general, Asian financial institutions have also strengthened their domestic and regional presence in recent years during the global financial crisis. We continue to adopt a quality growth style approach in our stock selection, favouring companies with strong balance sheet and leading franchises.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 November 2014, the Volatility Factor (VF) for this fund is 12.8 and is classified as "Very High". (source: Lipper) "Very High" includes funds with VF that are above 13.0 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 15 March 2014 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.
