**RHB-OSK ASIAN TOTAL RETURN FUND (formerly known as RHB ASIAN TOTAL RETURN FUND)**

This Fund aims to provide stable current income and capital appreciation by investing in debt securities issued by Asian corporations, financial institutions, governments and their agencies (including money market instruments).

**MANAGER'S COMMENTS**

**FUND PERFORMANCE**

The United Asian Bond Fund (the Fund) rose 0.31% in June 2014 while its benchmark, the JP Morgan Asia Credit Index Total Return Composite (JACI) fell 0.27%. For the first six months of the year, the fund rose 4.60% versus 4.53% for the benchmark.

**PERFORMANCE ATTRIBUTION**

During the period under review, the Fund's over-performance versus its benchmark was due to better credit selection. The fund retained an overweight position in non-investment grade credits and an underweight position in investment-grade credits. Non-investment grade credits returned 0.80% in SGD terms in June compared to a return of -0.63% for investment grade credits. For the first six months of 2014, non-investment grade credits have returned 6.01% while investment grade credits have returned 5.84%.

The Fund started June with 45.12% in high yield and unrated credits and 47.03% in high grade credits, with cash of 3.77%. During the month, we increased our holdings in high yield and unrated credits to 48.21% while weights in high grade credits fell to 43.83%. Cash rose to 4.16% at end June from 3.77% at end May 2014.

**OUTLOOK AND STRATEGY**

Asian credit spreads tightened by 12.6 basis points (bps) in June to 240.2 bps at end June versus 252.8 bps in May. Since the beginning of the year, Asian credit spreads have tightened by 23.2 bps. Meanwhile, Asian credit yields rose a modest 0.31 bps to 4.7054% after having fallen 30.7 bps in May 2014. On a year-to-date basis, Asian credit yields have fallen by 58.2 bps. The Asian credit market remains highly sensitive to sharp rises in US Treasury (UST) yields. Consequently, we will be overweight in credits that have a duration of less than five years going forward. Within the high grade space, we will be overweight in BBB-rated credits and underweight in credits which are rated A and above.

We will maintain our overweight in Chinese BB-rated high yield credits and stay significantly underweight in Chinese B-rated property credits. Overall, we will be slightly underweight in the Chinese property sector.

We will also continue to be overweight in Chinese state-owned enterprises (SOEs) and Indonesia high yield property credits due to their stable credit fundamentals. We will also maintain our overweight position in Sri Lankan quasi sovereigns and Mongolian sovereigns and quasi sovereigns as these are relatively resilient to higher US interest rates and also offer decent yields. We will be underweight in other sovereign and quasi-sovereign credits given their relatively unattractive valuations.

The UST 10-year yield has differed from market consensus by dropping 49.8 bps to 2.5304% in the first six months of 2014 after rising 54 bps in the second half of 2013 (H2 2013) (to 3.0282% at end-2013).

The fall in UST yield was due to poor US economic growth as the weather was unseasonably cold in the US in the first quarter. The prospect of quantitative easing (QE) by the European Central Bank (ECB) also helped to push down UST yields. Furthermore, the Chinese government was said to be buying UST in an attempt to weaken the Renminbi (RMB). Weather conditions in the US have since improved significantly while we believe that the Chinese are unlikely to buy UST on the same scale in H2 2014 as the Chinese authorities appear to be comfortable with the current level of RMB. Hence, we believe that the UST yield will climb towards 2.75 -3.0% over the next six months. Consequently, the Fund will continue to be underweight in duration.

**DISCLAIMER:**

Based on the fund's portfolio returns as at 15 June 2014, the Volatility Factor (VF) for this fund is 5.5 and is classified as "Low". (source: Lipper) "Low" includes funds with VF that are above 1.3 but not more than 7.9 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 31 December 2013 which is calculated once every six months and is valid until its next calculation date, i.e. 30 June 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Replacement Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are currency risk, country risk, liquidity risk, income distribution risk, risk of substantial redemptions and suspension of NAV calculation / limitation of redemption payments. These risks and other general risks are elaborated in the Master Prospectus.
