**MANAGER'S COMMENTS****MARKET REVIEW**

The China markets gained in July, in a month where global equities turned in a mixed performance with developed markets posting losses against gains in emerging markets (EM). Asia was the best-performing region within EM in July and is also now the best-performer year-to-date. The strength of the markets came on the back of a recovery in China where a pick-up in data boosted hopes of a recovery in the economy.

The global economic recovery remained intact with global leading indicators mostly remaining stable in July. In the developed markets, the US PMI improved to 57.1 in July from 55.3 in June. The PMI in Europe was stable at 51.8, while those in the UK and Japan dipped, though all stayed in expansion. China's official PMI continued to improve in July to 51.7 from 51.0, with the private sector HSBC PMI also improving to 51.7 from 50.7 in June. Most other latest activity indicators such as industrial production were stable across most markets. Inflation continued to remain stable across most markets though the Eurozone looked to be continuing its slide into deflation.

The China and Hong Kong markets were boosted by a strong-than-expected pick-up in activity indicators such as industrial production, fixed asset investment and exports. The recovery was in part helped by policy loosening such as the easing of some property measures, which lifted property transaction volumes. Monetary conditions have also become accommodative and the change in total social financing rose 90% y/y to RMB 1970 bn in June from RMB 1425 bn in May. Reforms also looked to be on track such as in the state-owned enterprises (SOEs) while the anti-corruption drive continued with a recent high profile case of a senior official being investigated.

**MARKET OUTLOOK AND STRATEGY**

China has a tough time balancing growth and reforms to resolve structural problems. There are many urgent areas that need to be resolved such as cleaning up the environment, reducing overcapacity; restructuring state owned enterprises (SOEs) and curbing excess credit build up. Most of the proposed reform measures will likely have a dampening effect on growth and corporate profits in the near term.

Hence, through most of the year to date, slowing growth and rising financial risk has weighed on investors' sentiment. However, recent data suggests that China's growth is improving owing to recovery in exports and targeted stimulus. The much talked about financial stress from the default of wealth management products has not materialized. The interbank rate still remains well behaved, and many of the potentially defaulted products have simply had their maturities pushed back or were re-structured.

The HSBC PMI picked up significantly to June and July after 5 months below 50. Other activity indicators such as retail sales, industrial production, FAI and exports also stabilized or registered improvement. In fact, exports should likely accelerate further in the 2nd half of the year as US growth picks up and on easier base year comparisons. The main negative remains the property sector, where we have been seeing a slowdown in property sales, starts and price cuts. The government has already eased home purchase restrictions across many cities. However, the oversupply in tier 3 cities is still very significant.

Recently, the government has eased the required reserve ratio for banks as well as the loan to deposit ratio for addition loans to SMEs and the rural sector. Home purchase restrictions have been loosened in many cities and banks encouraged to lend more mortgages for first time home buyers. Capital expenditure on railway spending and social housing has been raised this year too. Total social financing growth has accelerated again too, as seen from June 2014 data. President Li has come forward to re-iterate China's 7.5% growth this year, implying more emphasis on pro-growth policies ahead.

We believe that the current environment of stable to improving growth and policy easing should support the market. Nonetheless, China's restructuring challenges still have some way to go. Maintaining stable growth while keeping credit growth in check will be particularly difficult. China's debt to GDP has burgeoned to over 230% of GDP at end 2013 from less than 150% in 2008, even as growth has slowed from over 10% to 7.5% now. While the Central government balance sheet is still healthy, local government and SOE corporate balance sheets are stretched. Financial risks are rising as seen in the escalation of shadow banking and the acceleration of non-performing loans.

Investors will keenly watch for more concrete reform steps to tackle China's structural problems, including rising financial risks. However, the problems are complicated and solutions not straightforward, so we cannot expect a quick fix in a short time.

While the overall China market's performance patchy over the last 3 years, weighed down by structural problems, it is noteworthy that there has been a large dispersion in performance across stocks and sectors. For example, China's technology and utilities index has more than doubled in the last 3 years, compared to the financial sector which is just up marginally and the energy index which is down. If we position right in China, there can still be a lot of lucrative opportunities in the market.

We remain vigilant in tracking operating conditions across China given the slowdown in growth and the government's policy initiatives having uneven impact across industries. We look for opportunities to invest in companies that are benefitting from the rising purchasing power of the region's consumers or have technologies causing disruptive innovation to lifestyles and consumer spending patterns. However, stock selection is critical, given high competitive pressures.

We continue to underweight deep cyclical sectors such as materials in the face of China's slower growth over the medium term and general over-supply conditions. We are neutral on Financials given the tailwinds of RRR cuts, relaxation of LDR limits and stabilizing growth. However, we recognize they still face structural challenges - pressures of contracting profit and net interest margins with interest rate liberalization, non-bank disintermediation and rising NPLs. We are also overweight the Chinese utilities, in both traditional IPPs and renewable energy. We also like technology, from social media to component suppliers of smartphones, which are facilitating a sea change in consumer spending patterns.

In the long term, the China economy continues to be supported by high savings and wage gains, which provide an attractive backdrop for consumption growth. Rising purchasing power of the middle and lower income population is a very supportive backdrop for investors. When China gets through the current necessary painful transition, reforms and rebalances its economy towards a more sustainable growth path, these positive fundamentals should reassert themselves. The China market should then enjoy a sustained re-rating, with high rewards for long term investors now.

In the long term, the China economy continues to be supported by high savings and wage gains, which provide an attractive backdrop for consumption growth. Rising purchasing power of the middle and lower income population is a very supportive backdrop for investors. **DISCLAIMER:**

Based on the fund's portfolio returns as at 15 July 2014, the Volatility Factor (VF) for this fund is 15.7 and is classified as "Very High". (source: Lipper) "Very High" includes funds with VF that are above 13.0 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are restrictive geographical market, equities investment risks such as market risk and particular security risk and foreign investments risks such as country risk and currency risk. These risks and other general risks are elaborated in the Master Prospectus.
