MANAGER'S COMMENTS

MARKET REVIEW

The China equity markets gained in October, outperforming global equities and the broader Asia ex-Japan market. Investors' attention was focused on the significant global central bank actions at the end of October. The US Federal Reserve (Fed) ended quantitative easing as scheduled while the Bank of Japan (BoJ) surprised markets with its announcement to further ease monetary policy and the Japan government pension fund announced its plan to raise allocation to equities and foreign assets.

Global economic leading indicators all improved across the developed markets in October, though they were softer in emerging markets. The US PMI rose back to 59.0 from 56.6, Japan PMI rose to 52.8 from 51.7, the Eurozone inched up to 50.6 from 50.3 and the UK PMI rose to 53.2 from 51.5. China's official PMI softened to 50.8 in October from 51.1 in September, with the private sector HSBC PMI inching up to 50.4 from 50.2. Other latest activity indicator such as industrial production mostly dipped in August, though there was some improvement in September where data was available. Inflation remained largely stable across most markets.

The better-than-expected 3Q14 GDP data out of China and pick up in property sales from September following easing of mortgage rules allayed some concerns on further deterioration in the near-term economic outlook. China's central bank injected short-term liquidity into small banks and focused on lowering market interest rates, targeted quantitative easing and a shift in credit components to support the economy.

MARKET OUTLOOK AND STRATEGY

China has a tough time balancing growth and reforms to resolve structural problems. There are many urgent areas that need to be resolved such as cleaning up the environment, reducing overcapacity; restructuring state owned enterprises (SOEs) and curbing excess credit build up. Most of the proposed reform measures will likely have a dampening effect on growth in the near term.

Hence, the macro challenges of slower growth, rising debt levels and a property slowdown still persist, causing headwinds for the market. The government has adopted some selective targeted stimulus that has helped stabilize growth but activity has still slipped as credit is controlled. Property sales and starts have remained weak through most of the year. Clearly, China's continued rebalancing process will still cause growth headwinds over the medium term.

On the other hand at the micro-level, we see encouraging signs of improved corporate profitability. Despite a slowing economy and falling topline growth in the last two years, corporate profits in general have held up well in China. Data shows that they have been more disciplined in controlling capital expenditure and cutting costs. In the third quarter, Chinese corporates also improved the cashflow significantly. A further impetus to corporate profitability should come from State owned enterprises (SOE) reforms. The government is introducing a series of measures including private ownership in traditionally monopolistic industries and tightening cost control after a series of anti-corruption investigations. This should help improve the efficiency and profitability of the SOEs which have historically lagged the private sector.

After a brief surge in the middle of the year, the HSBC PMI has dipped back in latest 2 months, though still above the 50 level. Other activity indicators such as retail sales, industrial production, have also remained soft compared to earlier in the year. Property continued to be the main risk as there is a lot of oversupply especially in many tier 2 and 3 cities. A lot of developers are also highly levered through the shadow banking system and facing cash flow problems as sales have slowed down. The government has already eased home purchase restrictions across many cities and allowed wider availability of mortgages. September and October sales have already picked up as sentiment improved. However, the oversupply situation is still very significant. If the property sector rolls over, there is more downside to economic growth and greater financial risks.

China's macro challenges and restructuring process still has some way to go. Maintaining stable growth while keeping credit growth in check will be particularly difficult. China's debt to GDP has burgeoned to over 240% of GDP as of mid 2014 from less than 150% in 2008, even as growth has slowed from over 10% to 7% now. While the Central government balance sheet is still healthy, local government and SOE corporate balance sheets are stretched. Financial risks are rising as seen in the escalation of shadow banking and the acceleration of non-performing loans. We believe there are still very good investment opportunities in China, and we see improvements at the micro level in corporate profitability. However, there will be huge dispersions between the winners and losers in China's re-structuring process. Picking the right stocks in this challenging macro-environment will be very important.

We are positive on China. Policy easing, improving corporate profits and SOE reform momentum should help support the markets. China's macro challenges remain, but it looks to be well reflected in the price. China's valuations are very cheap, well below its 10 year mean on price to earnings, and in the case of price to book, already at levels during the 2008 global financial crisis. Within the regional Asian markets, China also stands out as the cheapest. History shows that if we buy markets at such valuation levels, we will very likely be rewarded with strong positive returns over the medium to long term. We believe that China will likely muddle through its problems. They have ample resources to cover its financial liabilities and cushion a potential hard landing if necessary. It's a matter of policy coordination. When China's shows progress in rebalancing its economy and resolving its macro challenges, the market should re-rate given its current cheap valuations. However, this may take some time given the current macro headwinds and concerns.

We remain vigilant in tracking operating conditions across China given the slowdown in growth and the government's policy initiatives having uneven impact across industries. We look for opportunities to invest in companies that are benefitting from the rising purchasing power of the region's consumers or have technologies causing disruptive innovation to lifestyles and consumer spending patterns. However, stock selection is critical, given slowing growth and high competitive pressures.

We continue to underweight deep cyclical sectors such as materials in the face of China's slower growth over the medium term and general over-supply conditions. We are neutral on Financials given the tailwinds of RRR cuts, relaxation of LDR limits and stable growth. However, we recognize they still face structural challenges - pressures of contracting profit and net interest margins with interest rate liberalization, non-bank disintermediation and rising NPLs. We like technology, from social media to component suppliers of smartphones, which are facilitating a sea change in consumer spending patterns. We are also positioned in selected Industrials which are gaining in competitiveness against international peers and winning overseas orders.

In the long term, the China economy continues to be supported by high savings and wage gains, which provide an attractive backdrop for consumption growth. Rising purchasing power of the middle and lower income population is a very supportive backdrop for investors. When China gets through the current necessary painful transition, reforms and rebalances its economy towards a more sustainable growth path, these positive fundamentals should reassert themselves. The China market should then enjoy a sustained re-rating, with high rewards for long term investors now.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 October 2014, the Volatility Factor (VF) for this fund is 13.4 and is classified as "Very High". (source: Lipper) "Very High" includes funds with VF that are above 13.0 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are restrictive geographical market, equities investment risks such as market risk and particular security risk and foreign investments risks such as country risk and currency risk. These risks and other general risks are elaborated in the Master Prospectus.
