MANAGER'S COMMENTS**MARKET REVIEW**

The FBMKLCI (KLCI) rebounded slightly in October after climbing 0.48% to close at 1,855.15. The overall trend was volatile in the last one month as investors continue to remain selective in terms of stock pickings that have resulted in some key blue chips heading further south whilst the main beneficiaries of the recently announced Budget 2015 measures managed to register some gains in October. During the month, gainers were led by PPB (+11.4%), KLK (+9.1%), Telekom (+9%), Tenaga (+7.9%), Digi (+5.8%); whilst laggards were led by Sapurakencana (-17.2%), IOI Properties (-12.7%), CIMB (-7.6%), UMW (-4.7%), and Malayan Banking (-2.6%).

On the economic front, Malaysia's industrial production growth for August improved to 6.5% after recording a low of 0.6% in the previous month. The mining sector was the worst performer with output increased 3.6% YoY while manufacturing output rose 7.4% YoY compared to July's 3.2% increase. Malaysia's inflation gained in the month of September as prices of food, alcohol & tobacco, housing and utilities increased. Consumer prices rose 2.6% from a year earlier after rising 3.3% in August.

Crude Palm Oil (CPO) prices increased 4.26% MoM to close at RM2266.00/tonne, with Malaysia biodiesel implementation set to pick up pace, as well as improving soybean prices. WTI Crude Oil ended the month 11.65% lower to US\$80.54/barrel, after U.S. crude production surged to the highest level since the 1980s. The Ringgit ended the month 0.89% weaker to RM3.3116/USD, dropping to a seven-month low after the Federal Reserve cited an improving labor market in ending its asset-purchase program, backing the case for U.S. interest rates to rise.

MARKET OUTLOOK AND STRATEGY

Leading indicators suggest that the global recovery is still taking place mainly driven by improvement in developed markets. However, in the short term basis, in particular second half of 2014, equity market might experience higher volatility and valuation adjustment once the Fed completely exit from its asset purchase program as that will trigger the investors to speculate the probability and timing of the interest rate hike. The US economy growth expectation has been revised up from 2.6% to 2.7% in 2014 with unemployment rate to improve to 6.5% in 2014 and 5.95% in 2015 as the business and manufacturing activities expand. Improvement in household wealth is expected to anchor consumer expenditure on real estate and automobiles. The European economy is showing signs of recovery with growth expectation of 1.1% by the ECB, supported by less austerity and continued strength in trade across the region. Nonetheless, the high unemployment rates, structural disparity between the core and peripheral European countries as well as the building deflationary forces remain a concern. The ECB will remain supportive with reflationary policies. Growth in emerging market and developing economies is expected to increase to 5.1% in 2014 and to 5.4% in 2015, according to IMF. Growth in China is expected to moderate to around 7.5% amid the economic transition and largely hinge on the execution of the reform blue print detailed in the Third Plenum.

Global portfolio adjustments continue from bonds to equities, despite equities being fully valued, mainly supported by confident on global economic growth outlook whilst offsetting rising bond yields. Equities in developed markets and North Asia in particular are likely to outperform on solid recovery whilst the Fed tapering will take a toll on emerging markets earnings growth due to higher borrowing costs and currency fluctuation. Emerging markets equities are likely to suffer from high volatility in the short term, however, as developed markets growth accelerate, Emerging markets should enjoy the spillover effect.

ASEAN is in healthy shape with a superior debt position relative to many markets in the West and is, in our view, standing on the brink of a multi-year structural growth story. The OECD projects an average annual growth of 5.5% for ASEAN over the next five years. Over the last decade, ASEAN GDP growth was driven by the ex-Singapore renaissance. Strong GDP growth was the result of rising productivity, the burgeoning middle class, young demographics in a huge population, governments' pro-stimulus policies on large scale infrastructure projects and increasing intra-regional trade flows as FTA come to the force.

Malaysia is expected to achieve a GDP growth of 4.5-5.5% in 2014 driven by private investment and consumption as well as the turnaround in the external demand. Efforts to rationalize subsidy and operating costs also boost investors' confidence on government's determination to rein in fiscal deficit. The major concern in 2014, however, will be the higher inflation and slower growth as a result of weaker ringgit and subsidy rationalization where after the adjustment of electricity tariff effective in January 1st of 2014 and the reduction of gas subsidy reduction.

We remained focus on investing in good quality companies with resilient earnings while we continue to hold on to our main thesis of investing on urbanization, and government's initiative in economic transformation projects. The key strategy would be to be nimble at adding or initiating new positions in well-managed companies that demonstrate a sustainable business models and decent dividend payouts with competitive advantages during the downside of the market.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 October 2014, the Volatility Factor (VF) for this fund is 8.2 and is classified as "Moderate". (source: Lipper) "Moderate" includes funds with VF that are above 7.9 but not more than 10.6 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 9 September 2014 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are stock market risk, liquidity risk, individual stock risk and issuer risk. These risks and other general risks are elaborated in the Master Prospectus.
