**RHB-OSK EMERGING OPPORTUNITY UNIT TRUST**

This Fund aims to achieve superior long term capital appreciation through investments in companies with high growth potential.

**MANAGER'S COMMENTS****MARKET REVIEW**

The local indices and market momentum remain weak in the month of November as investors were seen cautious amid lack of catalysts in the markets. Federal govt decision to remove the fuel subsidy and replaced by managed float system was seen as bode move by investors as a reign in fiscal deficit and channel the savings to fund the much needed infrastructure spending. Oil and gas sector was facing renew headwinds with oil price plunging over 30% since June 2014 and potential capex cut by national oil company Petronas put pressure on oil field related activities hence de-rating on broad spectrum of oil and gas stocks. Small mid cap space was not spared from the market weakness, judging by FBM Small Cap Index which fell 7.07% mom in November as investors concern on corporate earnings growth and potential impact on GST implementation on consumer consumption in 2015. In the meantime, Malaysia 3Q14 GDP growth eased to 5.6% yoy vs 6.4% in 2Q as exports growth and domestic demand weaken but inline with global trend. Industrial production also moderated to 5.4% yoy in September vs +6.5% in Aug, in tandem with slowing manufacturing activities.

The performance of the Asean-5 for the month of November was mixed as most of the countries continued to see inflows and outflows of foreign funds. Thailand's SET is expected to continue its outperformance vs. other regional peers after rising 22.73% YTD only behind the Philippines at 23.85% and India Sensex at 35.54% YTD. Thailand 3Q14 GDP edged up +0.6% yoy vs +0.4% in 2Q14 as recovery momentum remain subdued while manufacturing production fell 3.9% in September. Bank of Thailand (BOT) kept policy rate unchanged at 2% and maintain accommodative monetary policy to sustain Thailand economic growth momentum. Over to Philippines, merchandise exports advanced +15.7% in September vs +10.5% in Aug while 3Q GDP growth momentum slowed to +5.6% yoy. Singapore economy retooling phase is well intact with PM Lee govt rolling out infrastructure buildup such as Thomson East Coast Line etc. Singapore NODX contracted by 1.5% yoy in October due to slowdown in shipment to US, China, Malaysia and Indonesia but mitigated by exports pick up in Europe and Japan. Overall, Singapore exports recovery remained subdued and uneven, inline with global trade flow.

**MARKET OUTLOOK AND STRATEGY**

Malaysia is expected to grow between 4.5%-5.5% in 2014, likely nearer the upper band and higher than the 4.7% registered for 2013 and supported by a better global economy and investment spending. Inflation will be higher at 3.0%-4.0% from increased fuel and electricity costs and expectations of more reduction in subsidies moving forward and expected inflationary expectations prior to GST implementation. Against a backdrop of expected lower domestic demand and private consumption due to rising cost, net exports is expected to pick up helped by stronger exports to developed markets on an improving global economic growth outlook. BNM is likely to maintain its 3.25% OPR level for the rest of 2014 after the hike in July. Government fiscal restraints are expected to continue.

On sector basis, we continue to favour consumer, tech, healthcare, industrial and telco while selectively bullish bias on infra related construction stocks. We foresee 2015 continue to be a reform year for regional economies and Malaysia govt to rollout targeted infra projects to spearhead the economy and continue its reform agenda including subsidy rationalization which augur well for the economy. Increase market volatility globally will create capital misallocation and outflow of funds from emerging markets, thus misprice securities from fundamental. We remain cognizant of prevalent risks but look into adding bombed-out good fundamental stocks to enhance alpha.

**DISCLAIMER:**

Based on the fund's portfolio returns as at 15 November 2014, the Volatility Factor (VF) for this fund is 12.1 and is classified as "Very High". (source: Lipper) "Very High" includes funds with VF that are above 13.0 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 24 October 2014 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks for the Fund are lack of diversification to include larger sized companies, liquidity of underlying investments, equity investment risks such as market risk and particular security risk. These risks and other general risks are elaborated in the Master Prospectus.
