MANAGER'S COMMENTS**MARKET REVIEW**

May 2014 was a good month for global equities contrary to the popular market phrase "sell in May and go away". Investor sentiments were buoyed by the gradual improving economic data and reduction in geopolitical risks in Russia and Ukraine. Despite scaling new all-time highs on several days especially after the announcement of a spectacular Malaysian Gross Domestic Product ("GDP") growth number in 1Q14, the FBMKLCI ended flat for the month, up a marginal 2 points or 0.1% higher at 1,873 points. Foreigners continued to be net buyers in the local market. 1Q14 results season ended with generally uninspiring numbers with some notable misses especially in the oil & gas and plantation sectors.

On the domestic economic front, March trade surplus narrowed slightly as both exports and imports declined sequentially. Export growth slowed to 8.4% YoY and imports slowed sharply to 0.5% YoY. The trade surplus thus narrowed slightly to RM9.6bil. Bank Negara Malaysia ("BNM") kept Overnight Policy Rate ("OPR") on hold at 3%, as widely expected. However, the Central Bank's assessment of the global economy appears to have turned optimistic, with no reference to the recovery being "uneven". Private consumption is now expected to be "underpinned by stable income growth and favorable labor market condition" which suggests that private consumption growth may well exceed the 6.60% threshold. With the monetary policy committee ("MPC") meeting concluding that "the degree of monetary accommodation may need to be adjusted", market has brought forward the interest rate hike scenario to the next MPC meeting in July. This is further supported by a strong GDP growth of 6.2% YoY in 1Q2014 (4Q2013 5.1% YoY, consensus 5.7% YoY).

The hawkish tone from the central bank and the strong GDP figure caused the Malaysian Government Securities ("MGS") yield curve to underperform on the short end. The curve inched up by 10bps on the short end while tightened by 1 – 6bps on the long end, exhibiting a bearish flattening trend in May. Weak MGS and Government Investment Issues ("GII") performance have also deterred Ringgit Corporate Bond buying interest which saw the average daily trading volume further declining to RM370mil from RM387mil reported in April.

MARKET OUTLOOK

Global economic growth is slowly but surely improving, thanks to the various Quantitative easing (QE), accommodative and supportive packages by major world economies over the past few years. Despite hiccups along the way, there have been improvements in employment levels, business and consumer confidence, and industrial and manufacturing activities globally. With the U.S. poised to taper off completely its massive QE pumping by end of 2014 and start increasing its ultra-low interest rates, markets will continue to adjust to this transition from liquidity-driven to a more fundamental and growth-driven focus.

Malaysia is expected to grow between 4.5%-5.5% in 2014, likely nearer the upper band and higher than the 4.7% registered for 2013 and supported by a better global economy and investment spending. Inflation will be higher at 3.0%-4.0% from increased fuel and electricity costs and expectations of more reduction in subsidies moving forward and expected inflationary expectations prior to GST implementation. BNM is likely to hike the OPR by 25bps as early as July 2014. Fiscal restraints including those which were introduced by Prime Minister Dato' Seri Najib during the tabling of Budget 2014 are expected to continue.

Equities still look favourable as an asset class backed by corporate earnings growth, a conducive economic environment and a more stable fiscal plan. For fixed income, preference for corporate bonds is maintained, providing a steady income stream. Asset allocation (in-line with asset allocation limits) will be pro-actively managed with market movements to optimize investment returns.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 May 2014, the Volatility Factor (VF) for this fund is 6.8 and is classified as "Low". (source: Lipper) "Low" includes funds with VF that are above 1.3 but not more than 7.9 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 31 December 2013 which is calculated once every six months and is valid until its next calculation date, i.e. 30 June 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Replacement Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are allocation risks, stock market risk, interest rate risk, individual stock risk, credit / default risk, liquidity risk, issuer risk and inflation / purchasing power risk. These risks and other general risks are elaborated in the Master Prospectus.
