RHB-OSK INCOME FUND 1

This Fund aims to provide investors with a balanced mix of income and potential growth through investments across various types of asset.

MANAGER'S COMMENTS**MARKET REVIEW**

The local indices and market momentum remain weak in the month of November as investors were seen cautious amid lack of catalysts in the markets. Federal govt decision to remove the fuel subsidy and replaced by managed float system was seen as bode move by investors as a reign in fiscal deficit and channel the savings to fund the much needed infrastructure spending. Oil and gas sector was facing renew headwinds with oil price plunging over 30% since June 2014 and potential capex cut by national oil company Petronas put pressure on oil field related activities hence de-rating on broad spectrum of oil and gas stocks. Small mid cap space was not spared from the market weakness, judging by FBM Small Cap Index which fell 7.07% mom in November as investors concern on corporate earnings growth and potential impact on GST implementation on consumer consumption in 2015. In the meantime, Malaysia 3Q14 GDP growth eased to 5.6% yoy vs 6.4% in 2Q as exports growth and domestic demand weaken but inline with global trend. Industrial production also moderated to 5.4% yoy in September vs +6.5% in Aug, in tandem with slowing manufacturing activities.

Asian indices ended the month of November on a mixed note with the Shanghai Composite Index rising the most or +10.85% whilst the Shenzhen Composite Index climbed 5.17%. PBOC recent interest rate cut give hope to market of more easing in the near future as macro data remain mixed, with China industrial production fell 7.7% yoy while retail sales slowdown to 11.5% yoy. Closer to home, Singapore Straits Times Index edged up 2.33% MoM whilst Jakarta's Composite Index was flat at +1.19% MoM as investors optimism on President Joko Widodo govt bode step to hike petrol price in his series of economic reforms agenda in the country. Nikkei 225 +6.37% in November buoyed by market optimism as BOJ taking decisive move to increase quantitative easing in the effort to end decades long deflationary pressure and PM Abe announced dissolution of parliament lower house to pave way for new election as PM Abe seeks to obtain new mandate from Japanese people to push through his Abenomics agenda.

FIXED INCOME REVIEW & OUTLOOK

Organization of the Petroleum Exporting Countries ("OPEC") surprised the financial markets and left its oil production targets unchanged in the face of declining oil prices. As a result, inflation expectation in the US was faltered which resulting in UST bullish flattened in the yield curve. At close, the 2-, 5-, 10- and 30-year UST were traded at 0.47% (October: 0.49%), 1.48% (1.61%), 2.17% (2.34%) and 2.89% (3.07%) respectively.

Lower oil price posted a new concern for oil exporting country such as Malaysia. Ringgit weakened from 3.2835 at end-October to 3.3685 at end-November. Likewise, the Malaysian Government Securities ("MGS") also bearish flattened, with short-end yield increased by 6 – 12bps. At close, the 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS were traded at 3.56% (October: 3.50%), 3.75% (3.63%), 3.77% (3.77%), 3.86% (3.83%), 4.14% (4.15%), 4.24% (4.25%) and 4.59% (4.63%) respectively.

On the domestic economic front, BNM kept Overnight Policy Rate ("OPR") at 3.25% as widely expected. November was the last Monetary Policy Committee ("MPC") committee meeting for the year and the Central Bank has only delivered 25bps of policy rate hike throughout 2014, contrast with 50bps hike expected in the beginning of the year. September Trade surplus expanded more than expected on a sequential fall in imports. Export rose 2.0% YoY (August: 1.7% YoY), while import slowed to 1.1% YoY. Trade surplus for September was reported at RM9.33bil (August: RM 3.86bil). The increase in exports was due to higher machinery orders to US and China, which marked a sequential expansion since August. 3Q2014 GFP growth slowed to 5.6% YoY (2Q2014: 6.5% YoY) on weaker net exports as well as gross investments. Current Account surplus also narrowed sharply to RM7.6bil (or 2.8% of GDP), from RM16.0bil (or 6.1% of GDP) reported in 2Q2014. Lastly, October CPI only grew 2.8% YoY (September: 2.6% YoY, consensus: 3.0% YoY) as RON95 and diesel price was adjusted higher for the month.

MARKET OUTLOOK AND STRATEGY

Malaysia is expected to grow between 4.5%-5.5% in 2014, likely nearer the upper band and higher than the 4.7% registered for 2013 and supported by a better global economy and investment spending. Inflation will be higher at 3.0%-4.0% from increased fuel and electricity costs and expectations of more reduction in subsidies moving forward and expected inflationary expectations prior to GST implementation. Against a backdrop of expected lower domestic demand and private consumption due to rising cost, net exports is expected to pick up helped by stronger exports to developed markets on an improving global economic growth outlook. BNM is likely to maintain its 3.25% OPR level for the rest of 2014 after the hike in July. Government fiscal restraints are expected to continue.

Global economic growth is ticking up, thanks to the various Quantitative easing (QE), accommodative and supportive packages by major world economies over the past few years. Despite hiccups along the way, there have been improvements in employment levels, business and consumer confidence, and industrial and manufacturing activities globally. With the U.S. tapering off completely its massive QE pumping and start guiding on its current ultra-low interest rates, markets will continue to adjust to this transition from liquidity-driven to a more fundamental and growth-driven focus.

On sector basis, we continue to favour consumer, tech, healthcare, industrial and telco while selectively bullish bias on infra related construction stocks. We foresee 2015 continue to be a reform year for regional economies and Malaysia govt to rollout targeted infra projects to spearhead the economy and continue its reform agenda including subsidy rationalization which augur well for the economy. Increase market volatility globally will create capital misallocation and outflow of funds from emerging markets, thus misprice securities from fundamental. We remain cognizant of prevalent risks but look into adding bombed-out good fundamental stocks to enhance alpha.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 November 2014, the Volatility Factor (VF) for this fund is 5.7 and is classified as "Low". (source: Lipper) "Low" includes funds with VF that are above 1.1 but not more than 7.9 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 9 September 2014 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are stock market risk, liquidity risk, interest rate risk, credit / default risk and issuer risk. These risks and other general risks are elaborated in the Master Prospectus.
