RHB-OSK MALAYSIA DIVIDEND FUND (formerly known as OSK-UOB MALAYSIA DIVIDEND FUND)

This Fund aims to provide investors with capital growth and recurring income in the medium to long term through investments in securities of and securities relating to Malaysian companies which offer attractive yields and sustainable dividend payments.

MANAGER'S COMMENTS**MARKET REVIEW**

The FBMKLCI (KLCI) ended the month of August on a dismal note after falling 0.28% to end at 1,866.11. The KLCI remains a laggard compared to the regional peers year-to-date with a descent of -0.5% vs. Jakarta's 20.18% YTD, Thailand's 20.24% YTD and Singapore's STI 5.04% YTD. It remains to be seen whether the KLCI will be able to play 'catch up' with these indices as there are no compelling signals to warrant a steep upside in the remaining four months of 2014. The recently concluded Malaysia 2Q14 results season was also lackluster with more downside surprises vs. upside expectations which will likely drag the earnings growth below the 5.0% level YoY. Despite the GDP growth rising to as high as 6.4% in 2Q14 vs. 6.2% in 1Q14, investors appear to be more concerned on the rising tensions globally. During the month, gainers were led by Petronas Dagangan (+8.06%), UMW (+5.64%), MISC (+5.52%), CIMB (+5.43%), IHH (+3.83%); whilst laggards were led by KLK (-7%), Petronas Chemical (-5.12%), Felda (-4.98%), IOI Corp (-4.4%).

On the economic front, Malaysia's inflation gained in the month of July as prices of transport, food, housing and utilities increased. Consumer prices rose 3.2% from a year earlier after rising 3.3% in June. Industrial production growth for June accelerated to 7.0%, its fastest pace in 11 months, after hitting a high of 10.8% in July last year. The mining sector was the worst performer with output increasing by 1.4% YoY while manufacturing output rose 9.1% YoY compared to May's 8.0% increase.

Crude Palm Oil (CPO) prices decreased 15.05% MoM to close at RM1992.50/tonne, as demand remained weak despite the recent downfall in palm prices. WTI Crude Oil ended the month 2.25% lower to US\$95.96/barrel, after a government report showed that crude inventories at Oklahoma, the delivery point for the contract, increased for a fourth week. The Ringgit ended the month 1.52% stronger at RM3.1640/USD, after the Malaysia's 2Q GDP expanded at the fastest pace in six quarters and the country's current-account data beat estimates.

MARKET OUTLOOK AND STRATEGY

Leading indicators suggest that the global recovery is still taking place mainly driven by improvement in developed markets. However, in the short term basis, in particular second half of 2014, equity market might experience higher volatility and valuation adjustment once the Fed completely exit from its asset purchase program as that will trigger the investors to speculate the probability and timing of the interest rate hike. The US economy growth expectation has been revised up from 2.6% to 2.7% in 2014 with unemployment rate to improve to 6.5% in 2014 and 5.95% in 2015 as the business and manufacturing activities expand. Improvement in household wealth is expected to anchor consumer expenditure on real estate and automobiles. The European economy is showing signs of recovery with growth expectation of 1.1% by the ECB, supported by less austerity and continued strength in trade across the region. Nonetheless, the high unemployment rates, structural disparity between the core and peripheral European countries as well as the building deflationary forces remain a concern. The ECB will remain supportive with reflationary policies. Growth in emerging market and developing economies is expected to increase to 5.1% in 2014 and to 5.4% in 2015, according to IMF. Growth in China is expected to moderate to around 7.5% amid the economic transition and largely hinge on the execution of the reform blue print detailed in the Third Plenum.

Global portfolio adjustments continue from bonds to equities, despite equities being fully valued, mainly supported by confident on global economic growth outlook whilst offsetting rising bond yields. Equities in developed markets and North Asia in particular are likely to outperform on solid recovery whilst the Fed tapering will take a toll on emerging markets earnings growth due to higher borrowing costs and currency fluctuation. Emerging markets equities are likely to suffer from high volatility in the short term, however, as developed markets growth accelerate, Emerging markets should enjoy the spillover effect.

ASEAN is in healthy shape with a superior debt position relative to many markets in the West and is, in our view, standing on the brink of a multi-year structural growth story. The OECD projects an average annual growth of 5.5% for ASEAN over the next five years. Over the last decade, ASEAN GDP growth was driven by the ex-Singapore renaissance. Strong GDP growth was the result of rising productivity, the burgeoning middle class, young demographics in a huge population, governments' pro-stimulus policies on large scale infrastructure projects and increasing intra-regional trade flows as FTA come to the force.

Malaysia is expected to achieve a GDP growth of 4.5-5.5% in 2014 driven by private investment and consumption as well as the turnaround in the external demand. Efforts to rationalize subsidy and operating costs also boost investors' confidence on government's determination to rein in fiscal deficit. The major concern in 2014, however, will be the higher inflation and slower growth as a result of weaker ringgit and subsidy rationalization where after the adjustment of electricity tariff effective in January 1st of 2014 and the reduction of gas subsidy reduction.

We remained focus on investing in good quality companies with resilient earnings while we continue to hold on to our main thesis of investing on urbanization, and government's initiative in economic transformation projects. The key strategy would be to be nimble at adding or initiating new positions in well-managed companies that demonstrate a sustainable business models and decent dividend payouts with competitive advantages during the downside of the market.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 August 2014, the Volatility Factor (VF) for this fund is 9.3 and is classified as "Moderate". (source: Lipper) "Moderate" includes funds with VF that are above 7.9 but not more than 10.6 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing.
