MANAGER'S COMMENTS
MARKET REVIEW

Most indexes started the month of May in a slow and cautious note, tempered by the brewing tension in Ukraine. FBM KLCI touched its new high in May at 1,887.07 on 19th May in line with the movement of global markets. However, KLCI gave back much of the gains to end flattish. Results released during the month were also not inspiring and helped dampen market sentiment. The KLCI ended the month a marginal 2pts or 0.1% higher at 1,873pts. The broader market marginally underperformed the KLCI as the FBM Emas only gained 0.05% to 12,946pts. Small cap performance was mixed as the FBM Small cap gained 0.15% to 17,452pts but the FBM ACE declined 2pts mom to 6,581pts. Average daily value traded on Bursa in May declined 5% month on month to RM2.26bn.

The global bond markets continued to rally in May as Ukraine crisis remained escalated, weaker China's economic numbers coupled with mixed US data and reiteration statement by Yellen for low US interest rate environment induced buying spree by investors and portfolio managers who were largely remained in cash since early of the year. The Federal Open Market Committee minutes, indicated that taper is still on but the level of the balance sheet will likely come down slowly hence, policy rates are likely to rise slowly and it will take a few years for monetary policy to return to normal. A still weak Consumer Price Index ("CPI" Apr: 0.3% MoM, March: 0.2% MoM), and Producer Price Index ("PPI" April 0.6% MoM, March: 0.5% MoM), appears that consumption is still oscillating from the adverse winter.

Finally the revised US 1Q14 GDP which recorded a contraction of -1.0% annualized from the advance estimate of +0.1% compared to the 4Q2013 of 2.6%, flattened yield curve further. At the close, the 2-, 5-, 10- and 30-year UST were traded at 0.38% (April: 0.41%), 1.54% (1.68%), 2.48% (2.65%) and 3.33% (3.46%) respectively.

Back to the domestic bond market, the hawkish tone from Bank Negara's Monetary Policy Committee ("MPC") meeting, as well as strong 1Q2014 GDP growth has caused the Malaysia Government Securities ("MGS") yield curve to underperform on the short end. The curve inched up by 10bps on the short end while tightened by 1 – 6bps on the long end. At close, the 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS were traded at 3.48% (April: 3.38%), 3.72% (3.62%), 3.94% (3.94%), 4.03% (4.08%), 4.36% (4.42%), 4.59% (4.60%) and 4.89% (4.89%) respectively. Similarly, the Government Investment Issues ("GII") also traded the same trend as MGS curve, with 3-, 5-, 7-, 10-, 15-year and 20-year benchmark yields transacted at 3.67% (April: 3.42%), 3.85% (3.81%), 4.12% (4.08%), 4.21% (4.23%), 4.50% (4.54%) and 4.85% (4.85%) respectively.

Weak MGS and GII performance have also deter Ringgit Corporate Bond buying interest which saw the average daily trading volume further declined to RM370mil, from RM387mil reported last month. AA rated trades were more popular in May, with 51.46% of registered trades, followed by GG/AAA trades of 48.23%.

Khazanah 08/24 was last dealt at 4.61% with RM330mil done, Cagamas 09/2019 at 4.10% with RM165 transacted while Danainfra 10/2033 printed RM140mil at 5.16%. In the primary space, the notable issuance in May was AMAN Sukuk's RM1bil initial offering which was upsized to RM1.58bil after strong demand.

OUTLOOK AND STRATEGY

We believe the exodus of foreign institutional investors during 1Q14 have come to an end. For the month of May, foreign institutional investors have raked in holdings totaling approximately RM3.0 billion against the local institutional that have trimmed their staked amounting to RM2.6 billion respectively. New catalysts in Malaysia's Budget in coming October, calmer political situation, strong economic fundamentals and attractive capital market will be a magnet that will pull foreign institutional investors to Malaysia.

The latest MPC statement confirms that "there are signs of the continued buildup of financial imbalances" and that "current monetary and financial conditions could lead to a broader buildup in economic and financial imbalances." With private consumption growth exceeding the 7% threshold in the surprisingly strong 1Q GDP outturn, and inflation remained manageable, there is likely little room to further delay rate hikes. Current low interest rates environment should not continue for much longer as the resultant negative real interest rates will hurt savers. We opine that BNM will hike the OPR by 25bp in July at the earliest or latest by September this year.

On that note, we are adjusting the portfolio duration to neutral as a strategy to mitigate risk of any upward shift in yield curves. We will accumulate on pronounced uptick movement in yield.

DISCLAIMER:

Based on the fund's portfolio returns as at 15 May 2014, the Volatility Factor (VF) for this fund is 7.8 and is classified as "Moderate". (source: Lipper) "Moderate" includes funds with VF that are above 7.9 but not more than 10.6 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 31 December 2013 which is calculated once every six months and is valid until its next calculation date, i.e. 30 June 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Replacement Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are stock market risk, individual stock risk, liquidity risk, issuer risk, interest rate risk, credit / default risk and shariah specific risk. These risks and other general risks are elaborated in the Master Prospectus.
