**MANAGER'S COMMENTS****MARKET REVIEW**

In May, FBM KLCI remain flattish, +0.1% mom to 1873pt while YTD still recorded negative return, -0.10%. In the meantime, small mid cap stocks performance cool off in May, but YTD relatively better than big caps, KLCI Fledgling Index +0.66% mom and +16.2% YTD. The KLCI lacklustre trend underperformed ASEAN regional markets but outperformed North Asia peers. Within Asia region, India, Pakistan and Philippines were best performers, advanced circa +17%, +16.8% and 16% YTD respectively while CSI 300, Japan Nikkei 225 and HSCEI were worst performers, fell circa 8%, 7% and 4% YTD. Narendra Modi led BJP won India general election with clear majority, boosted investors confidence and market sentiment towards impending long overdue structural reform and pro business policy to take place in India. On ASEAN front, months long pro and anti-govt protest and unrest in Thailand ended with a military coup. The military govt under Gen. Prayuth Chan-ocha takes swift action to restore peace and order while initiated series of action to jump start the ailing economy – release final tranche of rice subsidy payment circa 90 billion baht to debt stricken farmers, review infra projects (MRT, high speed train) rollout and appointed 6-member Advisory Board to oversee the country. This augur well for Thailand market as it remove potential downside risk of further GDP weakness after 1Q14 contraction of 0.6%.

**MARKET OUTLOOK AND STRATEGY**

Despite lacklustre May performance on local bourse due to lack of positive catalyst, we maintain our positive view on equity market and envisage bottoming of corporate earnings downgrade and expect gradual recovery in 2H 2014. Nevertheless, Malaysia economy is expected to remain resilient. 1Q14 GDP +6.2% yoy, better than consensus of 5.8% and 4Q13 +5.1%. The key growth come from net export +7.9% yoy while govt consumption +11.2% yoy vs +5.2% in previous quarter. From valuation perspective, KLCI currently trade at 16x P/E vs FBM SmallCap Index at 11x P/E, both trade above 10-year historical average P/E but below +1SD.

On regional front, latest HSBC China manufacturing PMI came in improve to 49.7 in May vs 48.1 in Apr, a 5-month high PMI reading. We envisage China macro data continue to be mixed with soft patch due to Chinese govt determination to rebalance the economy. We expect the Chinese govt will react with selective/targeted easing should cyclical weakness threaten GDP growth and unemployment. EM reliance on China growth for commodities export may face headwinds in 2014. We envisage commodity producing countries equities performance to continue lag the Developed Market equities.

On sector basis, we continue to favour consumer, tech, healthcare, industrial and telco while selectively bullish bias on infra related construction stocks. We foresee 2014 to be a reform year for regional economies and Malaysia govt to rollout targeted infra projects to spearhead the economy and continue its reform agenda including subsidy rationalization which augur well for the economy. Increase market volatility globally will create capital misallocation and outflow of funds from emerging markets, thus misprice securities from fundamental. We remain cognizant of prevalent risks but look into adding bombed-out good fundamental stocks to enhance alpha.

**DISCLAIMER:**

Based on the fund's portfolio returns as at 15 May 2014, the Volatility Factor (VF) for this fund is 16.6 and is classified as "Very High". (source: Lipper) "Very High" includes funds with VF that are above 13.1 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 31 December 2013 which is calculated once every six months and is valid until its next calculation date, i.e. 30 June 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 1 December 2013 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are lack of diversification to include larger sized companies, liquidity of underlying investments, equity investments risks such as market risk and particular security risk. These risks and other general risks are elaborated in the Master Prospectus.
