**RHB-OSK SMART BALANCED FUND**

This Fund aims to maximize total returns through a combination of long term growth of capital and current income consistent with the preservation of capital through a combination of investments in companies with market capitalization of not more than RM1 billion and investments in fixed income securities.

**MANAGER'S COMMENTS****FUND REVIEW**

Smart Balanced's NAV posted a loss of 4.27%, underperforming its benchmark's (50% FBM Small Cap Index + 50% 12-month Fixed Deposit) loss of 4.19%. The outperformance was due to stock selection.

**MARKET REVIEW**

The local indices and market momentum remain weak in the month of November as investors were seen cautious amid lack of catalysts in the markets. Federal govt decision to remove the fuel subsidy and replaced by managed float system was seen as bode move by investors as a reign in fiscal deficit and channel the savings to fund the much needed infrastructure spending. Oil and gas sector was facing renew headwinds with oil price plunging over 30% since June 2014 and potential capex cut by national oil company Petronas put pressure on oil field related activities hence de-rating on broad spectrum of oil and gas stocks. Small mid cap space was not spared from the market weakness, judging by FBM Small Cap Index which fell 7.07% mom in November as investors concern on corporate earnings growth and potential impact on GST implementation on consumer consumption in 2015. In the meantime, Malaysia 3Q14 GDP growth eased to 5.6% yoy vs 6.4% in 2Q as exports growth and domestic demand weaken but inline with global trend. Industrial production also moderated to 5.4% yoy in September vs +6.5% in Aug, in tandem with slowing manufacturing activities.

**MARKET OUTLOOK AND STRATEGY**

Malaysia is expected to grow between 4.5%-5.5% in 2014, likely nearer the upper band and higher than the 4.7% registered for 2013 and supported by a better global economy and investment spending. Inflation will be higher at 3.0%-4.0% from increased fuel and electricity costs and expectations of more reduction in subsidies moving forward and expected inflationary expectations prior to GST implementation. Against a backdrop of expected lower domestic demand and private consumption due to rising cost, net exports is expected to pick up helped by stronger exports to developed markets on an improving global economic growth outlook. BNM is likely to maintain its 3.25% OPR level for the rest of 2014 after the hike in July. Government fiscal restraints are expected to continue.

The selldown in the Malaysian market was triggered by concern over crude oil price. Since Jun this year, the price of crude oil has fallen by approximately 30%. This resulted in a selldown in oil & gas related stocks, which in turn affected the whole market sentiment. Though the fund has little exposure to the oil & gas sector as we have been advising that the sector is over-valued, the reaction of the overall market affected the fund's performance.

We would analyze situations objectively rather than follow sentiment. The question that we have been asking investors is since when is a low crude oil price bad for economic growth? The answer is low crude oil IS good for economic growth, especially when the global economy (excluding the US), has yet to reach solid footing.

The decision to eliminate fuel subsidy starting from Dec 2014 is a very welcomed moved. The current low price environment made pulling this trigger possible as resistance will be minimal, considering the floated pump price is lower than the subsidy-era price. The implication towards the fiscal condition and economic mentality of the country is immense.

On sector basis, we continue to favour consumer, industrial and telco while selective oil & gas counters.

**DISCLAIMER:**

Based on the fund's portfolio returns as at 15 November 2014, the Volatility Factor (VF) for this fund is 10.7 and is classified as "High". (source: Lipper) "High" includes funds with VF that are above 10.6 but not more than 13.0 (source: Lipper). The VF means there is a possibility for the fund in generating an upside return or downside return around this VF. The Volatility Class (VC) is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC will be revised every six months. The fund's portfolio may have changed since this date and there is no guarantee that the fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. The VC referred to was dated 30 June 2014 which is calculated once every six months and is valid until its next calculation date, i.e. 31 December 2014.

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of the Master Prospectus dated 15 June 2014 and its supplementary(ies) (if any) ("the Master Prospectus") before investing. The Master Prospectus has been registered with the Securities Commission Malaysia who takes no responsibility for its contents. Amongst others, investors should consider the fees and charges involved. Investors should also note that the price of units and distributions payable, if any, may go down as well as up. Where a distribution is declared, investors are advised that following the issue of additional units/distribution, the NAV per unit will be reduced from cum-distribution NAV to ex-distribution NAV. Any issue of units to which the Master Prospectus relates will only be made on receipt of a form of application referred to in the Master Prospectus. For more details, please call 1-800-88-3175 for a copy of the PHS and the Master Prospectus or collect one from any of our branches or authorised distributors.

The Manager wishes to highlight the specific risks of the Fund are liquidity risk of underlying investments, equity investment risks such as market risk and particular security risk, interest rate risk, credit risk and inflation/purchasing power risk. These risks and other general risks are elaborated in the Master Prospectus.
