MANAGER'S COMMENTS

MARKET REVIEW

The FBMKLCI closed the calendar year third quarter on a weak note, with the benchmark index touching six-month lows in the month of September. This was on the back of increased net foreign selling (as also seen in the region) on the lack of local catalysts, uncertainties of when the U.S. Federal Reserve will begin its interest rate hikes, and continued geopolitical tensions with the European Union threatening to escalate sanctions if pro-Russian separatists advance further in eastern Ukraine, and a more prolonged student occupation in Hong Kong. The FBMKLCI closed the month at 1,846 points, or -1.06%.

On the domestic economic front, July's trade surplus narrowed less than expected to RM3.64bil on lower imports. Exports to US, Japan and China continue to slump while a mild expansion was seen in Europe and Singapore. Industrial Production in July rose just 0.5% YoY (June: 7.0% YoY), where the slowdown was broad based, and likely exaggerated by moving holiday effects as Ramadan fell almost entirely in Jul 2014.

Bank Negara Malaysia ("BNM") held the overnight policy rate ("OPR") unchanged at 3.25% in the September Monetary Policy Committee ("MPC") meeting, noting that the global economy "continues to expand at a moderate pace", similar to the July assessment, though "growth performance has been uneven" among advanced economies. On the domestic economy, while the MPC continues to expect the economy to remain on a "steady growth path", the omission of the word "firmly" suggests somewhat less conviction. The pause in the OPR spurred buying interest on the short-end of the curve. As a result, the local government bond market bullish steepened with short-end yields compressed more than long-end yields.

MARKET OUTLOOK

Global economic growth is ticking up, thanks to the various Quantitative Easing (QE) measures, accommodative and supportive packages by major world economies over the past few years. Despite hiccups along the way, there have been improvements in employment levels, business and consumer confidence, and industrial and manufacturing activities globally. With the U.S. tapering off completely its massive QE pumping and start guiding on its current ultra-low interest rates, markets will continue to adjust to this transition from liquidity-driven to a more fundamental and growth-driven focus.

Malaysia is expected to grow between 4.5%-5.5% in 2014, likely nearer the upper band and higher than the 4.7% registered for 2013 and supported by a better global economy and investment spending. Inflation will be higher at 3.0%-4.0% from increased fuel and electricity costs and expectations of more reduction in subsidies moving forward and expected inflationary expectations prior to GST implementation. Against a backdrop of expected lower domestic demand and private consumption due to rising cost, net exports is expected to pick up helped by stronger exports to developed markets on an improving global economic growth outlook. BNM is likely to maintain its 3.25% OPR level for the rest of 2014 after the hike in July. Government fiscal restraints are expected to continue.

Equities still look favourable as an asset class backed by corporate earnings growth, a conducive economic environment and a more stable fiscal plan. For fixed income, preference for corporate bonds is maintained, providing a steady income stream. Asset allocation (in-line with asset allocation limits) will be pro-actively managed with market movements to optimize investment returns.

DISCLAIMER:

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of The Disclosure Document in relation to the RHB Retirement Series dated 18 December 2012 and its supplementary(ies)(if any) ("Disclosure Document"), before investing.
