RHB RETIREMENT SERIES - GROWTH FUND

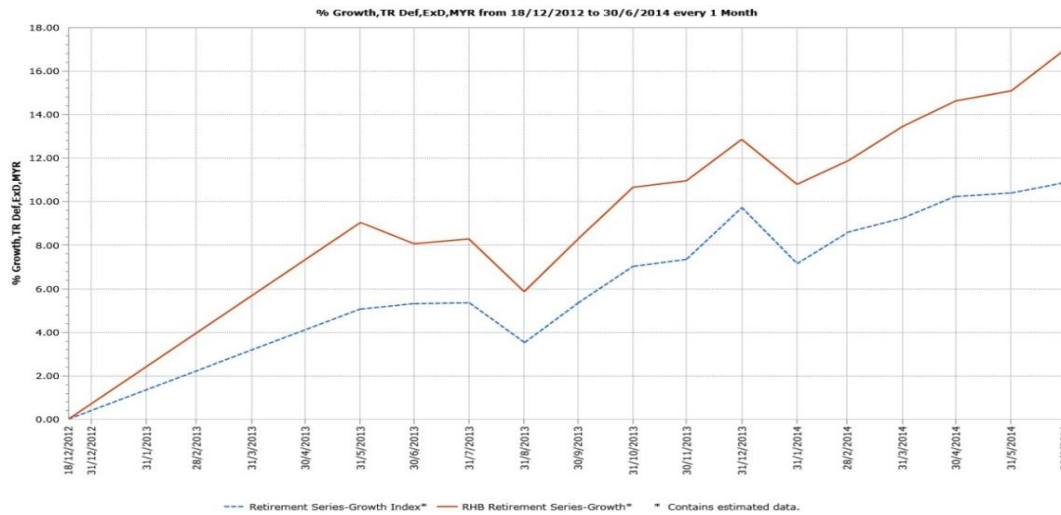

This Fund aims to seek to provide capital growth.

MANAGER'S COMMENTS**MARKET REVIEW**

The FBMKLCI edged up +0.50% in June to close the month at 1,882.71 points, registering a few new all-time high days in the process. The interest rate hike possibility, no major announcements at the annual Invest Malaysia forum, and a relatively more defensive and more expensive market compared to regional peers led the local bourse to underperform its regional peers. The broader market and small cap stocks outperformed the FBMKLCI. Average daily value traded on Bursa declined MoM to RM1.86b as foreign participation also decreased in May.

On the domestic economic front, April trade surplus narrowed only slightly as exports outpaced imports. April exports surged 18.9% YoY (Mar: 8.3% YoY) partly on base effects, above consensus of 9.7% YoY. Imports also rose 5.0% YoY (Mar: 0.5% YoY) above consensus of -0.5% YoY. With April seasonally adjusted export levels 4% above 1Q2014 levels, the continued resilience of exports is in-line with improving external demand. April industrial production was up sequentially to 4.2% YoY (Mar: 4.3% YoY), in-line with consensus. This points to a strong start to 2Q2014 GDP. May CPI inflation edged down to 3.2% YoY (April: 3.4%), led lower by food & beverages, utilities and communication.

The local bond market bullish flattened in June. The strengthening Ringgit and low market volatility prompted yield pick-up trades. At close, the 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS were traded at 3.51% (May: 3.48%), 3.72% (3.72%), 3.91% (3.94%), 4.03% (4.03%), 4.33% (4.36%), 4.40% (4.59%) and 4.74% (4.89%) respectively. The strong MGS also spurred buying interest on the local corporate bond market, with the average daily trading volume increased to RM408mil from RM370mil a month ago. Credit appetite also increased somewhat, with AA rated papers top trading volume reported at 55.8% of the total trade.

MARKET OUTLOOK

Global economic growth is slowly but surely improving, thanks to the various Quantitative easing (QE), accommodative and supportive packages by major world economies over the past few years. Despite hiccups along the way, there have been improvements in employment levels, business and consumer confidence, and industrial and manufacturing activities globally. With the U.S. poised to taper off completely its massive QE pumping by 2014 and start guiding on its current ultra-low interest rates, markets will continue to adjust to this transition from liquidity-driven to a more fundamental and growth-driven focus.

Malaysia is expected to grow between 4.5%-5.5% in 2014, likely nearer the upper band and higher than the 4.7% registered for 2013 and supported by a better global economy and investment spending. Inflation will be higher at 3.0%-4.0% from increased fuel and electricity costs and expectations of more reduction in subsidies moving forward and expected inflationary expectations prior to GST implementation. BNM is likely to hike the OPR by 25bps as early as July 2014. Fiscal restraints including those which were introduced by Prime Minister Dato' Seri Najib during the tabling of Budget 2014 are expected to continue.

Equities still look favourable as an asset class backed by corporate earnings growth, a conducive economic environment and a more stable fiscal plan. For fixed income, preference for corporate bonds is maintained, providing a steady income stream. Asset allocation (in-line with asset allocation limits) will be pro-actively managed with market movements to optimize investment returns.

DISCLAIMER:

A Product Highlights Sheet ("PHS") highlighting the key features and risks of the Fund is available and investors have the right to request for a PHS. Investors are advised to obtain, read and understand the PHS and the contents of The Disclosure Document in relation to the RHB Retirement Series dated 18 December 2012 and its supplementary(ies)(if any) ("Disclosure Document"), before investing.
