PRODUCT SUITABILITY

This Fund is suitable for conservative investors who seek a steady income stream from their investments and have a low to moderate risk tolerance with a medium to long term* investment horizon.

KEY PRODUCT FEATURES

INVESTMENT OBJECTIVE

This Fund aims to provide investors with higher than average income[^] returns compared to fixed deposits over a medium to long term* period through investments in a portfolio of predominantly quality fixed income securities with minimum risk to capital invested.

Note: **“medium to long term” in this context refers to a period of between 3 - 7 years.

[^]The income is in the form of units. Please refer to the Fund’s distribution mode.

INVESTMENT STRATEGY

This Fund seeks to achieve its investment objective by investing substantially all of its assets in fixed income securities (comprising amongst others of convertible debt securities, redeemable debt securities, bonds/securities that are issued and/or guaranteed by the government or quasi-government agencies, corporate bonds carrying at least BBB ratings by RAM Rating Services Berhad or its equivalent rating by any other rating establishment and fixed income collective investments schemes), money market instruments, cash and deposits with any financial institutions. At least 60% of Net Asset Value (“NAV”) will be invested in bonds. Although the Fund is actively managed, how active or the frequency of its trading strategy will very much depend on market opportunities.

For investments in foreign markets, the Manager in managing the principal risks such as country risk and currency risk will always take into consideration its evaluation of the historical developments and its prior experience in such markets. Such practice will be managed through active management and constant review of the economic and political developments of the countries invested. Investments will ultimately be made based on risk-reward.

The risk management strategies and techniques employed by the Manager include diversification of the Fund’s investments in terms of its exposure to various industries, sectors and asset classes and/or type of investments (i.e. fixed income, money market instruments). Financial derivatives may also be used for hedging purposes where appropriate. Generally, the assets of the Fund will be invested over a medium to long term period with disposal of the investments when necessary to control risk as well as to optimise capital gains. The Fund also complies with the permitted investments and restrictions imposed by the Securities Commission. Adherence to these permitted investments and restrictions also helps the Manager to risk-manage the Fund’s portfolio in terms of diversification. Moreover, the Manager in making its investment decisions shall at all times comply with the investment restrictions of the Fund and requirements as set out in the deed of the Fund.

BENCHMARK

12-month fixed deposit rate by Maybank Berhad.

DISTRIBUTION

DISTRIBUTION POLICY - Consistent with the Fund’s objective to provide investors with higher than average income[^] returns compared to fixed deposits, the Fund will distribute a substantial portion of its returns to unit holders of the Fund (“Unit Holder(s)”). Distributions, if any, after deduction of taxation and expenses, are generally declared annually and will be reinvested.

[^]Note: The income is in the form of units. Please refer to the Fund’s distribution mode.

DISTRIBUTION MODE - Distribution, if any, after deduction of taxation and expenses (i.e. net distribution), will be reinvested to purchase additional units of the Fund based on the NAV per unit as at the first Business Day when units in the Fund are quoted ex-entitlement. Allotment of such units shall be within two (2) weeks thereafter.

KEY RISKS

INTEREST RATE RISK - Prices of fixed income securities and debentures generally move in opposite direction with interest rates. When interest rates rise, prices of fixed income securities and debentures will generally fall. This rise in interest rate would cause the investor to face the risk of capital loss. But when interest rates fall, prices of fixed income securities and debentures would generally increase, therefore, investors would see capital gains.

CREDIT / DEFAULT RISK - This refers to the creditworthiness of the fixed income securities and debentures issuer and its expected ability to repay debt. Default happens when the issuer is not able to make timely coupon payments and/or repay or pay the principal in a timely manner thus lowering the value of the Fund's investments and subsequently the value of Unit Holders' investments.

LIQUIDITY RISK - Liquidity is the ability to convert an investment portfolio to cash without suffering a noticeable loss in value. The Malaysian fixed income securities and debentures market is not as liquid as the equity market and this may affect the price of any fixed income securities and debentures.

INFLATION / PURCHASING POWER RISK - Inflation can be defined as increases of the price level of goods and services and is commonly reported using the consumer price index as a measure. Inflation is one of the major risks to investors and results in uncertainty over the future value of the investments. Inflation reduces purchasing power of money. In an inflationary environment, fixed income securities are exposed to higher inflation risks than equities due to its fixed returns nature as compared to equities whose returns are variable.

As this Fund may invest up to 30% of its NAV in foreign markets, it may be subject to further risks, such as currency risk and country risk, when compared to a portfolio which concentrates its holdings in a single market or economy.
