PRODUCT HIGHLIGHTS SHEET

This Product Highlights Sheet only highlights the key features and risks of RHB GoldenLife 2020. Investors are advised to request, read and understand the Fund's prevailing prospectus and its supplementary(ies) (if any) before deciding to invest.

Name of Fund	RHB GoldenLife Funds - RHB GoldenLife 2020 ("Fund" or RHB GoldenLife 2020).	Fund Category	Balanced fund.
Manager	RHB Asset Management Sdn Bhd.	Launch Date	21 February 2005.
Trustee	HSBC (Malaysia) Trustee Berhad.	Financial Year End	28 / 29 February.
Maturity Date	The Fund matures on 29 February 2020. This Fund is designed to produce total return for investors planning to retire around the year 2020. As the year 2020 approaches, this portfolio will increasingly resemble RHB GoldenLife Funds - RHB GoldenLife Today. This Fund will on its maturity date be automatically terminated and merged into RHB GoldenLife Funds - RHB GoldenLife Today.		

PRODUCT SUITABILITY

This Fund is suitable for investors who are planning to retire around the year 2020.

KEY PRODUCT FEATURES

INVESTMENT OBJECTIVE

The Fund seeks to provide investors planning to retire in the year 2020, a wealth accumulation vehicle for meeting their financial needs upon retirement.

INVESTMENT STRATEGY

This Fund seeks to achieve its investment objective by structuring a portfolio as follows:

- Minimum of 40% and up to 60% of Net Asset Value ("NAV") will be invested in equities.
- Minimum of 40% and up to 60% of NAV will be invested in fixed income securities and/or liquid assets.

Although the Fund is actively managed, how active or the frequency of its trading strategy will very much depend on market opportunities.

This Fund will invest in equities and fixed income securities in Malaysia and in accordance with an asset allocation that will become increasingly conservative as the year 2020 approaches. Given that the rebalancing exercise and asset allocation process is dynamic, a dynamic and active investment strategy will be employed. The asset allocation will be reviewed from time to time depending on the judgement of the Manager as to the general market and economic conditions. However, this entire asset allocation structure will gradually resemble RHB GoldenLife Today as the Fund approaches the year 2020.

The bulk of the investments will be invested over a medium to long term period with active disposal and liquidation of the investments, a strategy to control risk as well as to optimise capital gains. This is especially so when the full growth potential of the investment is deemed to have been reduced over a prolonged bull run; and the resultant liquidity from the disposal of the investment may prove handy for further investments along similar lines of investments when the market has sufficiently eased off. Other risk management strategies and techniques employed by the Manager include diversification in terms of asset allocation.

When deemed appropriate and for the benefit of the Fund, the Manager may take temporary defensive positions in dealing with adverse market, economic, political and other conditions, that may be inconsistent with the Fund's principal strategy. In such adverse market conditions, the Manager may choose to change the asset allocation of the Fund by allocating more investments into money market instruments and deposits.

BENCHMARK

Weighted average of FTSE Bursa Malaysia KLCI Index (55%) and Maybank's 12 months fixed deposit rate (45%).

DISTRIBUTION

DISTRIBUTION MODE - Distributions (if any) which is less than or equal to the amount of RM300.00, will be automatically reinvested into the Fund based on the NAV per unit seven (7) Business Days after the ex-dividend date. No sales charge or costs shall be incurred or payable by the unit holders of the Fund ("Unit Holder(s)") for the reinvestment.

Distribution (if any) which is more than the amount of RM300.00, will be automatically paid out to the Unit Holders via cheque, unless the Unit Holder specifically requests for the distribution to be reinvested into the Fund by selecting the appropriate option in the application form. Unit

Holders who opt for their distribution to be reinvested into the Fund will have their distribution reinvested into the Fund based on the NAV per unit seven (7) Business Days after the ex-dividend date. No sales charge or costs shall be incurred or payable by the Unit Holders for the reinvestment. In the absence of the Unit Holder's written instructions, income distribution from the Fund will be automatically paid out to the Unit Holders via cheque. Unit Holders must notify the Manager in writing seven (7) Business Days prior to each date fixed for the distribution of any change in his distribution instructions.

DISTRIBUTION POLICY - Subject to the availability of income at the end of the financial year.

KEY RISKS

ALLOCATION RISKS - As the funds under the umbrella fund, RHB GoldenLife Funds (i.e. the RHB GoldenLife Today, RHB GoldenLife 2020 and RHB GoldenLife 2030), adopt a "metamorphosis" concept (that is, the asset allocation of each fund will automatically evolve over time), there is a risk that the recommended allocation of a fund at any one point in time will neither maximise returns nor minimise risks.

There is also a risk that given a particular time horizon, a recommended allocation will not prove to be the ideal allocation in all circumstances for every investor.

Each fund has a different level of risk. The funds with shorter time horizons (RHB GoldenLife Today for instance) will tend to be less risky and have lower expected returns over the long term than the funds with longer time horizon (RHB GoldenLife 2020 and RHB GoldenLife 2030, for instance). For example, to the extent a fund emphasises equities, such as RHB GoldenLife 2030, it presents a higher degree of equities investment risk. Conversely, to the extent a fund emphasises on bonds, such as RHB GoldenLife Today, it presents a higher degree of fixed income securities investment risk. The value of the investment in a fund is based, in large part, on the prices of the equities and fixed income securities in which the fund invests.

STOCK MARKET RISK - Securities may decline in value due to factors affecting securities markets generally or particular industries represented in the securities markets. The value of a security may decline due to general market conditions which are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or adverse investors' sentiment generally. They may also decline due to factors that affect a particular industry or industries, such as labour shortages or increased production costs and competitive conditions within an industry. Equity securities generally have greater price volatility than fixed income securities. The market price of securities owned by a unit trust fund might go down or up, sometimes rapidly or unpredictably.

INTEREST RATE RISK - Generally, bond prices move in the opposite direction of interest rates; a rise in interest rates will generally cause a fall in bond prices and vice versa. The Fund will experience a capital loss or capital gain should the bond be sold before maturity. In order to mitigate interest rates exposure of the Fund, the Manager will manage the duration of the portfolio via shorter or longer tenured assets depending on the view of the future interest rate trend of the Manager, which is based on its continuous fundamental research and analysis.

INDIVIDUAL STOCK RISK - The performance of each individual stock that the Fund invests in is dependent upon the management quality of the particular company and its growth potential. Hence, this would have an impact on the Fund's prices and its income distribution. The Manager aims to reduce all these risks by using diversification that is expected to reduce the volatility as well as the risk for the Fund's portfolio. In addition, the Manager will also perform continuous fundamental research and analysis to aid its active asset allocation management especially in its stock selection process.

CREDIT AND DEFAULT RISK - This refers to the likelihood that the company issuing the bonds may default. Securities are subject to varying degrees of credit risk, which are often reflected in credit ratings. Municipal bonds are subject to the risk that litigation, legislation or other political events, local business or economic conditions, or the bankruptcy of an issuer could have a significant effect on the issuer's ability to make payments of principal and/or interest. The Fund could lose money if the issuer or guarantor of a fixed income security, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honour its obligations. Credit risk can be managed by performing continuous fundamental credit research and analysis to ascertain the creditworthiness of its issuer. This risk refers to the possibility that the issuer of an instrument will not be able to make timely payments of interest or principal repayment on the maturity date. This may lead to a default in the payment of principal and interest and ultimately a reduction in the value of the Fund.

LIQUIDITY RISK - Liquidity risk exists when particular investments are difficult to sell, possibly preventing the Fund from selling such illiquid securities at a favourable price. Unit trust funds with principal investment strategies that involve securities or securities with substantial market and/or credit risk tend to have greater exposure to liquidity risk. As part of its risk management, the Manager will attempt to manage the liquidity of the Fund through asset allocation and diversification strategies within the portfolio. The Manager will also conduct constant fundamental research and analysis to forecast future liquidity of its investments.

ISSUER RISK - The value of each individual fixed income securities that the Fund invests in may decline for a number of reasons which is directly related to the issuer, such as, the management performance, financial leverage and reduced demand for the issuer's goods or services. The Manager aims to reduce all these risks by using diversification that is expected to reduce the volatility as well as the risk for the Fund's portfolio.

INFLATION/PURCHASING POWER RISK - Inflation can be defined as increases of price level of goods and services and is commonly reported using the consumer price index as a measure. Inflation is one of the major risks to investors over the long term and results in uncertainty over the future value of the investments. Inflation reduces purchasing power of money. In an inflationary environment, fixed rate securities are exposed to higher inflation risks than inflation-linked securities. This risk can be mitigated by investing in securities that can provide positive real rate of return.

VALUATIONS AND EXITING FROM INVESTMENT

VALUATION OF ASSETS

The Fund must be valued at least once every Business Day.

Accordingly, the valuation of the Fund for a Business Day will be conducted at the close of Bursa Malaysia for that Business Day. Thus, the daily price of the Fund for a particular Business Day will be published in the major newspapers on the next day.

Investors may obtain the most current computed price by contacting the Manager directly or visiting our website, www.rhbgroup.com.

EXITING FROM THIS INVESTMENT

Units of the Fund can be redeemed by forwarding the completed form of request to repurchase to the Manager's registered office or any of its branch offices, or to any its authorised sales agents or participating IUTAs before their respective cut-off times.

The Manager does not impose any minimum amount for any repurchase transaction but subject to the minimum holding requirement.

There are no restrictions on the number of units of the Fund a Unit Holder can redeem out of the Unit Holder's investments or the frequency of redemptions in a year. However, the Manager shall not be bound to comply with any request for redemption of units if the balance of units held after the redemption is less than two thousands (2,000) units or such other lower quantity as the Manager may from time to time decide (the "minimum investment balance"). For the avoidance of doubt, the Manager will deem an automatic request for a full repurchase of units to have been made by the Unit Holder should a request for partial redemption leave the balance of units held after the redemption less than the applicable minimum investment balance.
