### KEY RISKS

#### 6. What are the key risks associated with this product?

##### General Risks

- **Market risk** – Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative.
- **Fund management risk** – This risk refers to the day-to-day management of the Fund by the Manager which will impact the performance of the Fund. For example, investment decisions undertaken by the Manager as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the Deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weakness in operational process and systems, may adversely affect the performance of the Fund.
- **Performance risk** - There is no guarantee in relation to the investment returns or on the distribution of income to Unit Holders.
- **Inflation risk** – This is the risk that your investment in the Fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
- **Liquidity risk** - Liquidity risk arises in two scenarios. The first is where the Fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the Fund's investment, by its nature, is thinly traded.
- **Financing risk** – This risk occurs when you take a financing to finance your investment. The inherent risk of investing with financed money includes you being unable to service the financing repayments. In the event Units are used as collateral, you may be required to top-up your existing instalment if the prices of Units fall below a certain level due to market conditions. Failing which, the Units may be sold at a lower net asset value per unit as compared to the net asset value per unit at the point of purchase towards settling the financing.
- **Credit and Default risk** – Credit risk relates to the creditworthiness of the issuers of the investment (Sukuk and Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the investment. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment.
- **Interest rate risk** - The level of interest rates has an impact on the value of investments and economic growth of a country. High interest rates dampen investments and aggregate demand leading to an economic slowdown. The value of Sukuk move in the opposite direction of interest rates, any increase in rates will lead to a reduction in the value of Sukuk, thus affecting the NAV of unit trust funds.
- **Reclassification of Shariah status risk** – This risk refers to the risk that the currently held Shariah-compliant equities in the Fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council ("SAC") of the SC, the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, we will take the necessary steps to dispose of such equities.

*Note: Please refer to section 4.1 of the Master Prospectus on further detail of each risk.*

##### Specific Risks

- **Equity investment risk** – This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the Fund.

*Note: Please refer to section 4.2 of the Master Prospectus on further detail of each risk.*

## Asset Management

It is important to note that events affecting the investments cannot always be foreseen. Therefore, it is not always possible to protect investments against all risks. The various asset classes generally exhibit different levels of risk.

The investments of the Fund carry risks and you are recommended to read the whole Master Prospectus to assess the risks associated with the Fund. If necessary, you should consult your professional adviser(s) for a better understanding of the risks associated to the Fund.

### FEES & CHARGES

#### 7. What are the fees and charges involved?

There are fees and charges involved and you are advised to consider them before contributing to the Fund.
